UNITED NATIONS

Reports published by the International Narcotics Control Board in 2016

The *Report of the International Narcotics Control Board for 2016* (E/INCB/2016/1) is supplemented by the following reports:

Narcotic Drugs: Estimated World Requirements for 2017; Statistics for 2015 (E/INCB/2016/2)

Psychotropic Substances: Statistics for 2015; Assessments of Annual Medical and Scientific Requirements for Substances in Schedules II, III and IV of the Convention on Psychotropic Substances of 1971 (E/INCB/2016/3)

Precursors and Chemicals Frequently Used in the Illicit Manufacture of Narcotic Drugs and Psychotropic Substances: Report of the International Narcotics Control Board for 2016 on the Implementation of Article 12 of the United Nations Convention against Illicit Traffic in Narcotic Drugs and Psychotropic Substances of 1988 (E/INCB/2016/4)

The updated lists of substances under international control, comprising narcotic drugs, psychotropic substances and substances frequently used in the illicit manufacture of narcotic drugs and psychotropic substances, are contained in the latest editions of the annexes to the statistical forms ("Yellow List", "Green List" and "Red List"), which are also issued by the Board.

Rapports publiés par l'Organe international de contrôle des stupéfiants en 2016

Le *Rapport de l'Organe international de contrôle des stupéfiants pour 2016* (E/INCB/2016/1) est complété par les rapports suivants:

Stupéfiants: Évaluations des besoins du monde pour 2017 – Statistiques pour 2015 (E/INCB/2016/2)

Substances psychotropes: Statistiques pour 2015 – Prévisions des besoins annuels médicaux et scientifiques concernant les substances des Tableaux II, III et IV de la Convention sur les substances psychotropes de 1971 (E/INCB/2016/3)

Précuseurs et produits chimiques fréquemment utilisés dans la fabrication illicite de stupéfiants et de substances psychotropes: Rapport de l'Organe international de contrôle des stupéfiants pour 2016 sur l'application de l'article 12 de la Convention des Nations Unies contre le trafic illicite de stupéfiants et de substances psychotropes de 1988 (E/INCB/2016/4)

Les listes à jour des substances sous contrôle international, comprenant les stupéfiants, les substances psychotropes et les substances fréquemment utilisées dans la fabrication illicite de stupéfiants et de substances psychotropes, figurent dans les dernières éditions des annexes aux rapports statistiques annuels ("Liste jaune", "Liste verte" et "Liste rouge") publiées également par l'OICS.

Informes publicados por la Junta Internacional de Fiscalización de Estupefacientes en 2016

El *Informe de la Junta Internacional de Fiscalización de Estupefacientes correspondiente a 2016* (E/INCB/2016/1) está complementado por los siguientes informes:

Estupefacientes: Previsiones de las necesidades mundiales para 2017; Estadísticas de 2015 (E/INCB/2016/2)

Sustancias Sicotrópicas: Estadísticas de 2015; Previsiones de las necesidades anuales para fines médicos y científicos de las sustancias de las Listas II, III y IV del Convenio sobre Sustancias Sicotrópicas de 1971 (E/INCB/2016/3)

Precureores y productos químicos frecuentemente utilizados para la fabricación ilícita de estupefacientes y sustancias sicotrópicas: Informe de la Junta Internacional de Fiscalización de Estupefacientes correspondiente a 2016 sobre la aplicación del artículo 12 de la Convención de las Naciones Unidas contra el Tráfico Ilícito de Estupefacientes y Sustancias Sicotrópicas de 1988 (E/INCB/2016/4)

Las listas actualizadas de las sustancias sometidas a fiscalización internacional, que comprenden estupefacientes, sustancias sicotrópicas y sustancias frecuentemente utilizadas para la fabricación ilícita de estupefacientes y sustancias sicotrópicas, figuran en las ediciones más recientes de los anexos de los formularios estadísticos ("Lista Amarilla", "Lista Verde" y "Lista Roja"), también publicados por la Junta.

Introduction

1. In addition to its annual report, the International Narcotics Control Board (INCB) publishes technical information in accordance with the following provisions of the Convention on Psychotropic Substances of 1971:

Article 18. Reports of the Board

1. The Board shall prepare annual reports on its work containing an analysis of the statistical information at its disposal, and, in appropriate cases, an account of the explanations, if any, given by or required of Governments, together with any observations and recommendations which the Board desires to make. The Board may make such additional reports as it considers necessary. The reports shall be submitted to the Council through the Commission, which may make such comments as it sees fit.

2. The reports of the Board shall be communicated to the Parties and subsequently published by the Secretary-General. The Parties shall permit their unrestricted distribution.

2. The technical data are published for control purposes and to meet the needs of researchers, enterprises and the general public. Pursuant to the provisions of article 16, paragraph 4, parties are required to furnish to the Board annual statistical reports relating to

the substances listed in Schedules I-IV of the 1971 Convention. The statistical data that parties to the 1971 Convention are required to furnish to the Board differ according to the Schedule in which a given substance is included. The individual tables of the present technical report are based on those data.

3. Data reported later than 1 November 2016 could not be taken into consideration in preparing this technical report.

4. In 2012, the Board decided to modify the structure of its technical publication on psychotropic substances by moving some information to the annexes. The Board also decided to reduce the overall volume of the printed part of the publication by including the annexes in a CD-ROM¹ attached to the printed part of the publication. All information contained in the previous editions of the publication continues to be included in the publication, although in a different order (see page *iii*). Readers who wish to access the information contained in the annexes will have to make use of the attached CD-ROM. The entire publication, including the annexes, will also be available on the INCB website (www.incb.org).

¹The CD-ROM contains the entire publication, including the annexes, and other selected INCB publications.

Introduction

1. Outre son rapport annuel, l'Organe international de contrôle des stupéfiants (OICS) publie des informations techniques conformément aux dispositions ci-après de la Convention de 1971 sur les substances psychotropes.

Article 18. Rapports de l'Organe

Parties sont tenues de fournir à l'OICS des rapports statistiques annuels sur les substances des Tableaux I à IV de la Convention de 1971. Les informations statistiques que les Parties à la Convention de 1971 ont l'obligation de fournir à l'OICS varient selon le Tableau auquel appartient une substance donnée. Les différents tableaux du présent rapport technique sont basés sur ces données.

3. Les données communiquées après le 1^{er} novembre 2016 n'ont pas été prises en compte pour la préparation du présent rapport technique.

4. En 2012, l'OICS a décidé de modifier la structure de sa publication technique sur les substances psychotropes en déplaçant certaines informations dans les annexes. Il a également décidé de réduire le volume global de la partie destinée à être imprimée en ne publiant les annexes que sur un CD-ROM¹ qui y serait joint. Toutes les informations qui figuraient dans les précédentes éditions se trouvent toujours dans la publication, même si c'est dans un ordre différent (voir p. v). Les lecteurs qui souhaitent consulter les informations figurant dans les annexes devront se reporter au CD-ROM ci-joint. La publication dans sa totalité, y compris les annexes, sera aussi disponible sur le site Web de l'OICS (www.incb.org).

¹Le CD-ROM contient la publication dans sa totalité, y compris les annexes, ainsi qu'une sélection d'autres publications de l'OICS.

2. Les rapports de l'Organe sont communiqués aux Parties et publiés ultérieurement par le Secrétaire général. Les Parties autorisent la libre distribution de ces rapports.

2. Les renseignements techniques sont publiés à des fins de contrôle et à l'intention des chercheurs, des entreprises et du public. Conformément aux dispositions du paragraphe 4 de l'article 16, les

Introducción

1. La Junta Internacional de Fiscalización de Estupefacientes (JIFE) publica, además de su informe anual, información técnica de conformidad con las siguientes disposiciones del Convenio de 1971 sobre Sustancias Sicotrópicas:

Artículo 18. Informes de la Junta

1. La Junta preparará informes anuales sobre su labor; dichos informes contendrán un análisis de los datos estadísticos de que disponga la Junta y, cuando proceda, una reseña de las declaraciones hechas por los gobiernos o que se les hayan pedido, si las hubiere, junto con las observaciones y recomendaciones que la Junta deseé hacer. La Junta podrá preparar los informes complementarios que considere necesarios. Los informes serán sometidos al Consejo por intermedio de la Comisión, que formulará las observaciones que estime oportunas.
2. Los informes de la Junta serán comunicados a las Partes y publicados posteriormente por el Secretario General. Las Partes permitirán que se distribuyan sin restricciones.
2. Los datos técnicos se publican para fines de control y para satisfacer las necesidades de los investigadores, las empresas y el público en general. En cumplimiento de lo dispuesto en el párrafo 4 del artículo 16, se pide a las partes que faciliten a la Junta informes estadísticos anuales en relación con las sustancias incluidas en las

Listas I a IV del Convenio de 1971. Los datos estadísticos que las partes en el Convenio de 1971 deben suministrar a la Junta varían según la Lista en la cual esté incluida la sustancia de que se trate. En los diferentes cuadros del presente informe técnico se resumen esos datos.

3. Los datos comunicados después del 1.º de noviembre de 2016 no se pudieron tener en cuenta al preparar este informe técnico.
4. En 2012, la Junta decidió modificar la estructura de su publicación técnica sobre sustancias sicotrópicas trasladando parte de la información a los anexos. La Junta también decidió reducir el volumen total de la parte impresa de la publicación incluyendo los anexos en un CD-ROM¹ adjunto a la parte impresa. Se sigue incluyendo en la publicación toda la información que figuraba en sus ediciones anteriores, aunque en diferente orden (véase la página vii). Los lectores que deseen acceder a la información que figura en los anexos tendrán que utilizar el CD-ROM adjunto. Toda la publicación, incluidos los anexos, estará también disponible en el sitio web de la JIFE (www.incb.org).

¹El CD-ROM contiene toda la publicación, incluidos los anexos, y otras publicaciones de la JIFE.

Table II. Receipt of statistics for 2015

Table II reflects the extent of compliance by Governments with the provisions of article 16 of the 1971 Convention in submitting to INCB annual statistical information for 2015. The table also shows to what extent Governments have voluntarily submitted additional information to INCB, pursuant to recommendations of the Board endorsed by the Economic and Social Council and by the Commission on Narcotic Drugs, that is, quarterly statistics on international trade in substances in Schedule II, and information on countries of destination of exports and countries of origin of imports of substances in Schedules III and IV (Council resolutions 1981/7, 1985/15 and 1987/30) and statistics on the consumption of psychotropic substances (Commission resolution 54/6). The following symbols are used in table II:

A question mark (?) indicates that the statistical report for 2015 had not been received by 1 November 2016;

The symbol “×” indicates that the substances listed in the relevant Schedule are under national control and that the competent administration has furnished for 2015 at least part of the required statistical information;

A dash (—) indicates that the substances listed in the relevant Schedule are under national control but no movement of the substances has been reported by the competent administration;

Countries and non-metropolitan territories are listed in English alphabetical order; the names of territories are shown in italics. The names of countries and territories are those that were in official use at the time the data were collected (in 2015).

Tableau II. Réception des statistiques pour 2015

Le tableau II indique quels gouvernements se sont conformés aux dispositions de l'article 16 de la Convention de 1971 en soumettant à l'OICS des statistiques annuelles pour 2015. Ce tableau indique aussi dans quelle mesure les gouvernements ont volontairement soumis à l'OICS des informations supplémentaires, conformément aux recommandations de l'OICS approuvées par le Conseil économique et social et par la Commission des stupéfiants, c'est-à-dire des statistiques trimestrielles sur le commerce international des substances du Tableau II, des renseignements sur les pays de destination des exportations et les pays d'origine des importations de substances inscrites aux Tableaux III et IV (résolutions 1981/7, 1985/15 et 1987/30 du Conseil) et des statistiques sur la consommation de substances psychotropes (résolution 54/6 de la Commission). Dans ce tableau, les symboles suivants ont été utilisés:

Un point d'interrogation (?) indique que le rapport statistique pour 2015 n'avait pas été reçu au 1^{er} novembre 2016;

Le signe “×” indique que les substances inscrites au Tableau en question sont sous contrôle national et que l'administration compétente a fourni au moins une partie des données statistiques requises pour 2015;

Un tiret (—) indique que les substances inscrites au Tableau en question sont sous contrôle national, mais que l'administration compétente n'a signalé aucun mouvement des substances en question;

Les pays et territoires figurent dans l'ordre alphabétique anglais; les noms des territoires apparaissent en italique. Les noms des pays et territoires sont ceux qui étaient officiellement en usage au moment où les données ont été recueillies (en 2015).

Cuadro II. Recepción de las estadísticas de 2015

En el cuadro II se refleja la medida en que los gobiernos cumplen con las disposiciones del artículo 16 del Convenio de 1971 en lo que respecta a la presentación a la JIFE de la información estadística anual correspondiente a 2015. En el cuadro también se indica en qué medida los gobiernos han presentado voluntariamente a la JIFE, en cumplimiento de las recomendaciones de la Junta, que hicieron suyas el Consejo Económico y Social y la Comisión de Estupefacientes, información adicional, como, por ejemplo, estadísticas trimestrales sobre comercio internacional de sustancias incluidas en la Lista II, información sobre los países de destino de las exportaciones y los países de origen de las importaciones de sustancias incluidas en las Listas III y IV (resoluciones 1981/7, 1985/15 y 1987/30 del Consejo Económico y Social) y estadísticas sobre el consumo de sustancias psicotrópicas (resolución 54/6 de la Comisión). En dicho cuadro se utilizan los símbolos siguientes:

El signo de interrogación (?) indica que al 1 de noviembre de 2016 no se había recibido el informe estadístico correspondiente a 2015;

El signo “×” indica que las sustancias incluidas en la Lista correspondiente están sometidas a fiscalización nacional y que la administración competente ha facilitado por lo menos una parte de la información estadística requerida correspondiente a 2015;

La raya (—) indica que las sustancias incluidas en la Lista correspondiente están sometidas a fiscalización, pero que la administración competente no registró ningún movimiento;

Los países y territorios no metropolitanos se enumeran en orden alfabético inglés; los nombres de los territorios aparecen en letra cursiva. Los nombres de los países y territorios son los que se utilizaban oficialmente en el momento en que se obtuvo la información (en 2015).

Table III. Defined daily doses for statistical purposes (S-DDD) for psychotropic substances

The term “defined daily doses for statistical purposes (S-DDD)”, which has replaced the term “defined daily doses (DDD)”, is used by INCB as a technical unit of measurement for the purpose of statistical analysis and is not a recommended prescription dose. Its definition is not free of a certain degree of arbitrariness. Certain psychotropic substances may be used in certain countries for different treatments or in accordance with different medical practices, and therefore a different daily dose

could be more appropriate. The indicated S-DDD should be considered approximate and subject to modifications if more precise information becomes available. The basis for the grouping of the substances was, as far as possible, the anatomical therapeutic chemical classification system used in the Nordic Statistics on Medicines and recommended by the World Health Organization for drug utilization studies. In addition, the grouping reflects the Schedules of the 1971 Convention.

Tableau III. Doses quotidiennes déterminées à des fins statistiques (S-DDD) pour les substances psychotropes

Le terme “doses quotidiennes déterminées à des fins statistiques (S-DDD)” remplace le terme “doses quotidiennes déterminées” utilisé par l’OICS. La S-DDD est une unité de mesure technique utilisée aux fins de l’analyse statistique et non une recommandation posologique. Sa définition n’est pas dépourvue d’un certain caractère arbitraire. Certaines substances psychotropes pouvant être utilisées pour différents traitements ou conformément à des pratiques médicales différentes dans différents pays, une autre dose quotidienne pourrait être mieux adaptée. Les S-DDD indi-

quées devraient être considérées comme approximatives et sujettes à modification si des indications plus précises venaient à être disponibles. Pour le regroupement des substances, on s’est fondé, dans la mesure du possible, sur le système de classification anatomique, thérapeutique et chimique utilisé dans les statistiques nordiques des médicaments et recommandé par l’Organisation mondiale de la santé pour les études sur l’utilisation des médicaments. En outre, ce regroupement correspond aux tableaux de la Convention de 1971.

Cuadro III. Dosis diarias definidas con fines estadísticos (S-DDD) para las sustancias sicotrópicas

La expresión “dosis diarias definidas” utilizada anteriormente por la JIFE fue sustituida por la expresión “dosis diarias definidas con fines estadísticos (S-DDD)”. La S-DDD es una unidad técnica de medida que se utiliza a efectos del análisis estadístico, y no una dosis de prescripción recomendada. Su definición no está exenta de cierto grado de arbitrariedad. Es posible que determinadas sustancias se utilicen en determinados países para tratamientos diferentes o conforme a prácticas médicas diferentes y que, por lo tanto, resulte

más apropiada otra dosis diaria. Las S-DDD que se indican deben considerarse aproximadas y podrían modificarse si se contara con información más precisa. En la medida de lo posible, las sustancias se agruparon con arreglo al sistema de clasificación anatómica, terapéutica y química utilizado en las estadísticas nórdicas sobre medicamentos y recomendado por la Organización Mundial de la Salud para los estudios sobre utilización de medicamentos. Además, es la forma en que están agrupadas en las listas del Convenio de 1971.

Phenobarbital — Phénobarbital — Fenobarbital	100.00	Triazolam	0.25
Phentermine — Fentermina	15.00	Vinylbital — Vinilbital	150.00
Pinazepam — Pinazépam	15.00	Zolpidem	10.00

Note: A dash (—) indicates that the substance has no assigned S-DDD. — *Note:* Un tiret (—) indique qu'il n'a pas été fixé de S-DDD pour la substance en question. — *Nota:* La raya (—) indica que la sustancia no tiene asignada una S-DDD.

^aBy its decision 56/1, the Commission decided to transfer gamma-hydroxybutyric acid (GHB) from Schedule IV to Schedule II of the 1971 Convention. In accordance with article 2, paragraph 7, of that Convention, the decision became fully effective with respect to each party on 4 December 2013. — Par sa décision 56/1, la Commission des stupéfiants a décidé de transférer l'acide gamma-hydroxybutyrique (GHB) du Tableau IV au Tableau II de la Convention de 1971. Conformément au paragraphe 7 de l'article 2 de cette Convention, la décision a pris pleinement effet pour chaque Partie le 4 décembre 2013. — En su decisión 56/1, la Comisión decidió transferir el ácido gamma-hidroxibutírico (GHB) de la Lista IV a la Lista II del Convenio de 1971. De conformidad con el artículo 2, párrafo 7, de ese Convenio, la decisión entró en vigor plenamente respecto de cada una de las partes el 4 de diciembre de 2013.

^bIn the past, the Board calculated one S-DDD to be equal to 1.2 mg of buprenorphine, a measure that reflected the dosage units used for treatment of pain in the late 1990s. In view of the increasing use of higher dosage units of buprenorphine for the treatment of pain and opioid dependence, the Board decided to calculate, as of 2010, one S-DDD to be equal to 8 mg of buprenorphine. Data on buprenorphine expressed in S-DDD in this publication are therefore not comparable with the corresponding data shown for previous years. — Par le passé, l'OICS se fondait, pour la buprénorphine, sur une S-DDD de 1,2 mg, ce qui correspondait à la dose utilisée pour le traitement de la douleur à la fin des années 90. Considérant l'emploi de plus en plus fréquent de doses supérieures pour le traitement de la douleur et de la dépendance aux opioïdes, l'OICS a décidé de se fonder, à compter de 2010, sur une S-DDD de 8 mg. Les données relatives à la buprénorphine qui sont exprimées en S-DDD dans la présente publication ne sont donc pas comparables avec les données correspondantes qui figurent dans les publications des années précédentes. — Anteriormente la Junta calculaba que una S-DDD equivalía a 1,2 mg de buprenorfina, cantidad que reflejaba las unidades de dosificación utilizadas para el tratamiento del dolor a finales de la década de 1990. Debido al uso cada vez más generalizado de unidades de dosificación de buprenorfina más altas para el tratamiento del dolor y la dependencia a los opioides, la Junta decidió calcular, a partir de 2010, que una S-DDD equivale a 8 mg de buprenorfina. Por tanto, los datos sobre la buprenorfina expresados en S-DDD en la presente publicación no son comparables a los datos correspondientes a años anteriores.

COMMENTS ON THE REPORTED STATISTICS ON PSYCHOTROPIC SUBSTANCES

Summary

The analysis contained in the present section of the technical publication on psychotropic substances is based on statistical data furnished by Governments. The quality of the analysis depends on the quality of the data provided.

Use of substances included in Schedule I of the Convention on Psychotropic Substances of 1971 should be limited to scientific research and, in certain cases, for the manufacture of psychotropic substances in other schedules. The isolated use of some substances in Schedule I for the manufacture of other substances has declined in recent years. The number of substances included in this schedule has been increasing; four new psychoactive substances were added in 2015 and 2016.

Manufacture of methylphenidate (a central nervous system stimulant in Schedule II of the 1971 Convention) and its use for the treatment of attention deficit hyperactivity disorder (ADHD) has continued to increase worldwide. After reaching a recent low of 62 tons in 2014, global manufacture reached a record high of 72 tons in 2015, owing to a sharp rise in output by the United States of America. That country remained the leading manufacturer, accounting for 73 per cent of total output. It was followed by the United Kingdom of Great Britain and Northern Ireland, which accounted for 17 per cent of global output. The countries with the highest levels of reported per capita consumption for 2015 were (in descending order) Iceland, Canada, the United States, Sweden, the Netherlands, Denmark, Switzerland and New Zealand.

Manufacture of amphetamines, which are the other central nervous system stimulants in Schedule II of the 1971 Convention, increased from its recent low of 41 tons in 2014 to 51 tons in 2015 (3.4 billion defined daily doses for statistical purposes (S-DDD)). This development is mainly the result of a sharp increase in the manufacture of dexamfetamine in the United States during the year. The United States continued to be the main consumer of amphetamines in 2015 in absolute terms, as well as in terms of per capita consumption.

Buprenorphine, an opioid analgesic listed in Schedule III of the 1971 Convention, has been increasingly used since the late 1990s in the treatment of pain and in substitution treatment for opioid addicts. Global manufacture of buprenorphine attained a new record of 12.6 tons (1.6 billion S-DDD) in 2015. Global calculated consumption of buprenorphine decreased slightly compared with the previous year and amounted to 11.2 tons (1.4 billion S-DDD) in 2015. The United States remained the leading consumer, with reported consumption of 4.3 tons (540 million S-DDD) in 2015. Other major consumers in that year were Belgium, the United Kingdom, Germany and India (in descending order). The number of countries that reported imports of buprenorphine increased in 2015.

A total of 35 benzodiazepines are currently under international control, and are divided into three classification groups. Of those, 22 are classified as anxiolytics and 12 are classified as sedative-hypnotics and are used in medical practice for pre-medication and the induction of general anaesthesia. The other benzodiazepine under international control, clonazepam, is the only benzodiazepine that is used mainly as an anti-epileptic. Flunitrazepam, a sedative-hypnotic, is the only benzodiazepine that is listed in Schedule III of the 1971 Convention; the rest are listed in Schedule IV. A total of 39.8 billion S-DDD of all benzodiazepines were reportedly manufactured in 2015, 49 per cent more than in 2014. Twenty-two Governments reported manufacture of benzodiazepines, with 10 of them reporting manufacture of benzodiazepines in all three classification groups. Italy (11.9 billion S-DDD), India (7.6 billion S-DDD) and the United States (6.7 billion S-DDD) were the main manufacturers of benzodiazepines in 2015. Alprazolam (15 billion S-DDD), lorazepam (4.9 billion S-DDD) and diazepam (4.1 billion S-DDD), all classified as benzodiazepine-type anxiolytics, were the most manufactured psychotropic substances in 2015, in terms of S-DDD. The combined total calculated consumption of benzodiazepines increased by 19 per cent compared with 2014, and stood at 36 billion S-DDD in 2015.

Of the 12 barbiturates listed in Schedules II, III and IV of the 1971 Convention, five substances, namely phenobarbital, butalbital, pentobarbital, barbital and amobarbital (in descending order), together accounted, on average, for 99 per cent of total yearly reported manufacture during the period 2005-2015. The shares of those five substances in the total reported manufacture in 2015 are shown in figure 28. Phenobarbital remained the most widely manufactured barbiturate in 2015, accounting for 67 per cent of the total manufacture of the 12 barbiturates, followed by butalbital and pentobarbital. China continued to be the leading manufacturer, accounting for 59 per cent of total manufacture of the entire group of barbiturates, followed by the United States, Germany and Japan. International trade in a number of barbiturates has declined during the past five years.

The 14 central nervous system stimulants listed in Schedule IV of the 1971 Convention are used mainly as anorectics or for the treatment of ADHD. Total reported manufacture of this group of substances, which had been on the rise during the period 2004-2012, dropped to 1.9 billion S-DDD in 2014 and then rose to 2.1 billion S-DDD in 2015, with the United States and Germany accounting for 45 per cent and 37 per cent, respectively, of the global total. Other major manufacturing countries included Italy (10 per cent) and Argentina (5 per cent). In 2015, calculated consumption of stimulants in Schedule IV in the Americas remained the highest in the world. Levels of consumption declined in Asia, but increased in all other regions (Africa, the Americas, Europe and Oceania). The highest consumption rates, expressed in S-DDD per 1,000 inhabitants per day, were reported by New Zealand, the United States, Chile, Mexico, Costa Rica and Argentina (in descending order). Phentermine continues to be the most used substance in this group, accounting for 90 per cent of calculated consumption.

Substances for which global manufacture or international trade amounted to less than 1 kilogram in recent years are not mentioned separately in the analysis below; however, the data on those substances are included in the relevant group totals, as applicable.

Substances in Schedule I of the Convention on Psychotropic Substances of 1971

1. As of September 2016, 34 substances¹ are listed in Schedule I of the Convention on Psychotropic Substances of 1971. The use of those substances should be prohibited, pursuant to the provisions of article 7 of the Convention, except for scientific and very limited medical purposes by duly authorized persons in medical or scientific establishments that are directly under the control of or specifically approved by their Governments. This restriction results from the fact that all substances in Schedule I are hallucinogens and/or central nervous system stimulants with very limited or no medical use.

2. In line with this restriction, manufacture and stocks of, as well as trade in, those substances have been extremely limited, with the exceptions noted in the following paragraphs.

3. The 1971 Convention does not foresee use of the psychotropic substances in Schedule I by industry for the manufacture of non-psychotropic substances or products. However, until 2002, 2,5-dimethoxyamphetamine (DMA) was manufactured in the United States, exclusively for use in the manufacture of a non-controlled film dye, in

amounts of several tons per year. Manufacture of DMA started to decline in 2002, owing to a decrease in the demand for photographic film, and stopped entirely in 2007. Global stocks of DMA, which had been depleted since 2008, stood at 7 grams at the end of 2015.

4. Another substance in Schedule I that is used by industry for the manufacture of non-psychotropic substances is *para*-methoxy-*alpha*-methylphenethylamine (PMA). During the period 2005-2015, Denmark reported intermittent manufacture of PMA, for use in the manufacture of tamulosin, an active pharmaceutical ingredient that is not under international control. In 2014, Denmark manufactured 146 kilograms (kg) of the substance. In 2015, Denmark increased its manufacture of PMA to 389 kg.

5. Use of the psychotropic substances included in Schedule I for the manufacture of psychotropic substances that are included in other schedules was reported only by the United States. In that country, isomers of tetrahydrocannabinol (THC) listed in Schedule I are used in the manufacture of *delta*-9-tetrahydrocannabinol (*delta*-9-THC), which is listed in Schedule II. Of the isomers in Schedule I, *delta*-8-tetrahydrocannabinol is the main substance manufactured in the United States. Since 2005, when it reached 327 kg, reported manufacture in that country of isomers of THC listed in Schedule I has fluctuated, reaching a low of 53 kg in 2010. In 2015, the total amount of isomers of THC manufactured in the United States was 66.4 kg. At the end of 2015, global stocks of such isomers stood at 169.6 kg, the vast majority of which were held in the United States.

¹At its fifty-eighth session, in March 2015, the Commission on Narcotic Drugs decided to include the following three substances in Schedule I of the 1971 Convention: 25B-NBOMe (2C-B-NBOMe); 25C-NBOMe (2C-C-NBOMe); and 25I-NBOMe (2C-I-NBOMe). Furthermore, at its fifty-ninth session, in March 2016, the Commission decided to place *para*-methoxymethylamphetamine (PMMA) in Schedule I of the 1971 Convention. The Board will analyse the statistics reported on the substances scheduled in 2015 and 2016 when Governments provide the requisite data.

Substances in Schedule II of the 1971 Convention

6. Listed in Schedule II are 27 substances that have little to moderate therapeutic usefulness and whose liability to abuse constitutes a substantial risk to public health. The substances belong to the following groups: central nervous system stimulants, anti-emetics, hallucinogens, sedative-hypnotics, antitussives and antidepressants. In addition to their various applications in human and veterinary medicine, some of these substances are used in industry for the manufacture of other psychotropic substances or for conversion into non-psychotropic substances.²

Central nervous system stimulants

7. Total manufacture of central nervous system stimulants in Schedule II fluctuated at around 3.3 billion defined daily doses for statistical purposes (S-DDD) annually during the period 2004–2011, but significantly increased to a peak of 5.5 billion S-DDD in both 2012 and 2013. After declining to 4.8 billion S-DDD in 2014, global manufacture rose again and reached 5.8 billion S-DDD in 2015 (see figure 1). The increase was the result of a noticeable rise in the total manufacture of the three main substances of this group: dexamfetamine, methylphenidate and amphetamine (in descending order by the amount of increase in their manufacture). In 2015, the United States continued to account for the majority of the total output of stimulants in Schedule II (78 per cent). The share of methylphenidate in the total output of stimulants in Schedule II was 41 per cent, followed by dexamfetamine (35 per cent) and amphetamine (22 per cent). These three substances accounted for almost all of the total combined output in 2015 (98 per cent).

Amphetamines

8. Both optical isomers of amphetamine (levamfetamine and dexamfetamine) and their racemic mixture (amphetamine), as well as both optical isomers of metamfetamine (levomethamphetamine and metamfetamine) and their racemic mixture (metamfetamine racemate), are listed in Schedule II. Statistical reports on amphetamine, dexamfetamine and metamfetamine have been received by the International Narcotics Control Board (INCB) from

Governments since the 1970s. Statistics on levamfetamine and levomethamphetamine have been available since 1986 and statistics on metamfetamine racemate have been available since 1988, reflecting the different dates on which those substances were brought under international control in the context of the 1971 Convention.

Figure 1. Stimulants in Schedule II: total reported manufacture, by substance, 2006–2015

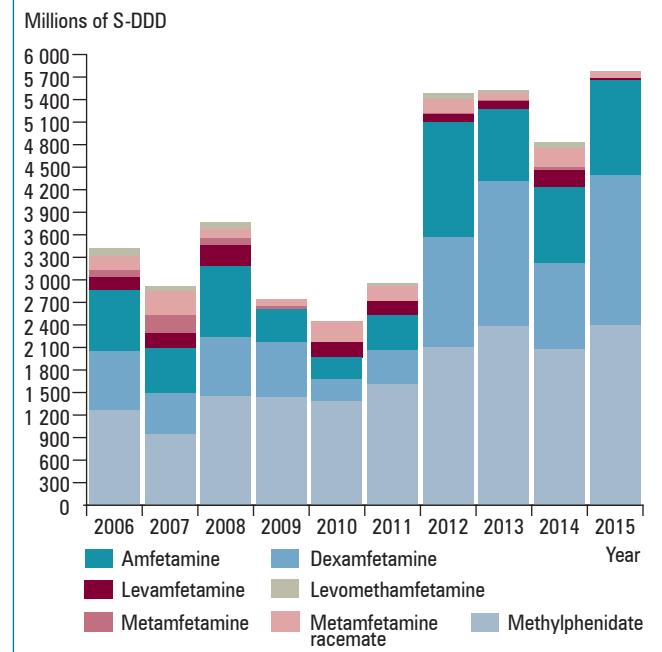

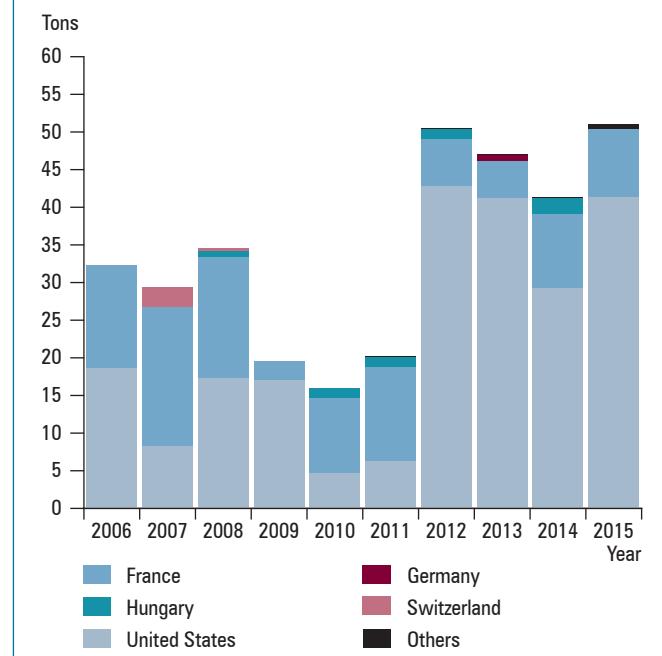

Figure 2. Amphetamines: total reported manufacture, by country, 2006–2015

²In 2015, six substances were included in Schedule II: mephedrone, N-benzylpiperazine (BZP), JWH-018, AM-2201, 3,4-methylenedioxypyrovalerone (MDPV) and methylone (*beta*-keto-MDMA). In 2016, another three substances were added: methoxetamine (MXE), α -pyrrolidinovalerophenone (α -PVP) and *para*-methyl-4-methylaminorex (4,4'-DMAR). The Board will analyse the statistics reported on the substances scheduled in 2015 and 2016 when the Governments provide the requisite data.

9. After a declining trend since 2012, the global manufacture of amphetamines listed in Schedule II increased from 41 tons (2.8 billion S-DDD) in 2014 to 51 tons (3.4 billion S-DDD) in 2015 (see figure 2). In 2015, the United States continued to account for the majority of the global manufacture of amphetamines listed in Schedule II (82 per cent), with the rest accounted for by France (18 per cent). In 2015, dexamfetamine comprised 59 per cent of the total output of amphetamines in Schedule II and amphetamine accounted for 37 per cent. Levomethamphetamine, metamfetamine and metamfetamine racemate comprised another 2 per cent, 0.6 per cent and 0.4 per cent, respectively.

Use as intermediate substances

10. Amphetamines in Schedule II of the 1971 Convention are frequently used in industry as intermediary products for the manufacture of other substances (see figure 3). The new substances manufactured from amphetamines may be divided into two groups: other psychotropic substances, including those which are optical isomers of the original substance; and substances not controlled under the 1971 Convention. In France and the United States, amphetamines in Schedule II are widely used in industry for conversion into other amphetamines included in Schedule II. In the United States, amphetamine is also used in the synthesis of lisdexampetamine (l-lysine-d-amphetamine), a pro-drug of dexamfetamine, which is used in the treatment of attention deficit hyperactivity disorder (ADHD). The

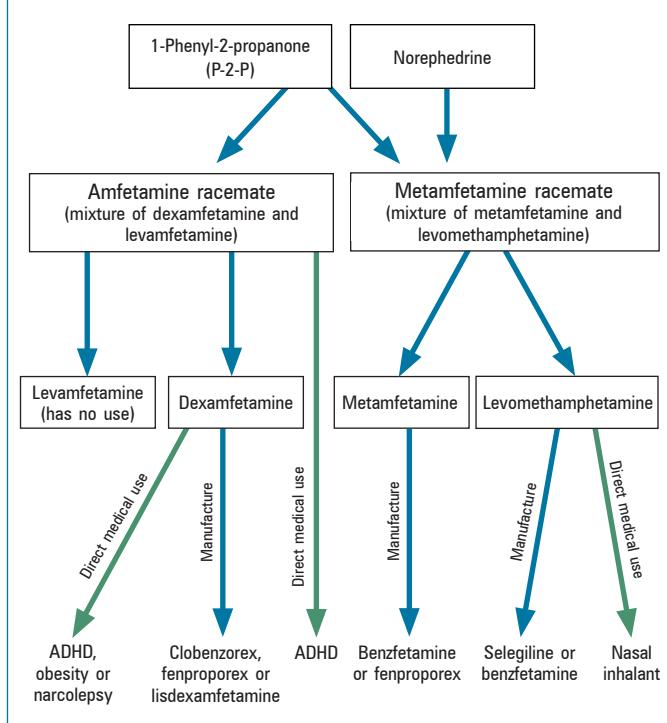

United States regularly reports to the Board the quantity of lisdexampetamine (a substance not under international control) manufactured per year. In 2015, about 3.6 tons of lisdexampetamine were manufactured from 3.2 tons of dexamfetamine. Furthermore, 227 kg of metamfetamine were converted into 169 kg of benzphetamine (a Schedule IV anorectic).

Direct medical use

11. For direct medical purposes, amphetamines are used mainly for the treatment of ADHD and narcolepsy. The extensive use of amphetamines for the treatment of obesity has been considerably reduced or discontinued in most countries. While the quantities of amphetamines used for direct medical purposes are relatively small in most countries, the medical use of amphetamine and dexamfetamine in the United States has increased significantly since the 1990s. However, reported consumption of those substances in the United States has followed a downward trend since 2011, which may be a sign of their gradual replacement by lisdexampetamine, which is not under international control and for which no data are reported to INCB. Use of amphetamine and dexamfetamine has increased in some other countries, notably Australia, Canada and Denmark. While France has traditionally been a major manufacturer of amphetamines, there is very limited medical use of amphetamines in that country, and almost all the amphetamines manufactured there are destined for export.

12. The countries with the highest levels of reported consumption and calculated medical and industrial³ uses of amphetamines, calculated on the basis of statistics provided by Governments⁴ and expressed in S-DDD per 1,000 inhabitants per day,⁵ are listed in tables 1 and 2, respectively, in descending order of their rate of use in 2015.

Figure 3. Amphetamines: use in industry

³ Excluding use for the manufacture of other amphetamines and non-psychotropic substances.

⁴ The method used for calculating levels of consumption of psychotropic substances is explained in the explanatory note to table IV in part three of the present publication.

⁵ The list of S-DDD used in those calculations is presented in part one, table III, of the present publication.

Table 1. Amphetamines: reported consumption rate, selected countries, 2013-2015

Country	S-DDD per 1,000 inhabitants per day		
	2013	2014	2015

Comments on amphetamines, by substance

13. Following a record low of 17 tons in 2014, global manufacture of dexamfetamine significantly increased in 2015, to 30 tons. That considerable increase was driven mainly by the sharp rise in manufacture in the United States, from 16 tons in 2014 to 28 tons in 2015. As the top manufacturing country of dexamfetamine, the United States also held the largest share of global stocks in 2015 (16 tons, or 92 per cent). In addition, that country remained the main user of dexamfetamine for medical purposes, reporting consumption of 11 tons for 2015. Such use was also reported by a number of other countries, including Canada (377 kg), Australia (198 kg), Denmark (141 kg), the Netherlands (53 kg), Germany (35 kg) and Sweden (14 kg). Global exports amounted to 1.3 tons in 2015, nearly all of which (1.2 tons) was accounted for by France, followed by the United States (95 kg) and the Netherlands (64 kg). Similarly to 2014, about 20 countries reported imports of dexamfetamine in 2015. Germany and Canada reported the largest imports, accounting for 62 and 18 per cent of the global total, respectively.

14. After reaching a recent low of 15 tons in 2014, global manufacture of amphetamine rose to 19 tons in 2015, the

result of a significant increase in production by France, from 2.6 tons in 2014 to 6.7 tons in 2015. Manufacture of amphetamine by the United States amounted to about 12.2 tons in 2015, comparable to the level in 2014. As in previous years, the United States and France were the only major manufacturers of the substance, accounting for 64 and 35 per cent, respectively, of global output. Those two countries also remained the main exporters of the substance. In particular, the United States exported 631 kg of amphetamine in 2015, accounting for 93 per cent of global exports. Amphetamine is used mainly in combination with dexamfetamine in the United States. In 2015, that country reported consumption of 9 tons of amphetamine. Global imports of amphetamine in 2015 amounted to 154 kg, the main importers being Canada (115 kg), Chile (15 kg) and Israel (12 kg). At the end of 2015, the majority of global stocks were held by the United States (10.8 tons, or 93 per cent of the total).

15. During the period 2005-2014, total reported manufacture of levomethamphetamine fluctuated between 4.3 tons in 2005 and no output in 2009 and 2010. After increasing to 1.1 tons in 2012, total output dropped to 614 kg in 2013, and then rose to 1.2 tons in 2014. Global manufacture of levomethamphetamine in 2015 remained at a comparable level (1.2 tons), with the United States accounting for the majority (733 kg) and France (328 kg) and Czechia (111 kg) for the remainder. In recent years, an average of about 460 kg of levomethamphetamine has been used annually in the United States for the manufacture of nasal inhalants for domestic use, which are exempted in that country from certain control measures, in accordance with article 3 of the 1971 Convention. In 2015, 470 kg of levomethamphetamine were used for that purpose.

16. While, in the two decades leading up to 2009, global reported manufacture of metamfetamine averaged 2.9 tons annually, manufacture fluctuated between 442 grams in 2010 and 646 kg in 2014. In 2015, total manufacture dropped to 280 kg, mainly as a result of zero production in Hungary, the top manufacturer in 2014. The United States accounted for almost all global manufacture of metamfetamine in 2015, reporting an output of 280 kg. Global stocks of metamfetamine amounted to 1,056 kg in 2015, with the majority being held by the United States (58 per cent) and France (42 per cent). Only small amounts of metamfetamine were imported in 2015 (1.1 kg), mainly by Japan and Australia.

17. Global manufacture of metamfetamine racemate dropped considerably, from 3.7 tons in 2014 to 203 kg in 2015. That significant reduction was mainly the result of a reduction by France (from 2,264 kg in 2014 to 203 kg in 2015). Total exports of metamfetamine racemate in 2015 increased to 2,212 kg, with France accounting for almost all exports. The output of France was exported to the

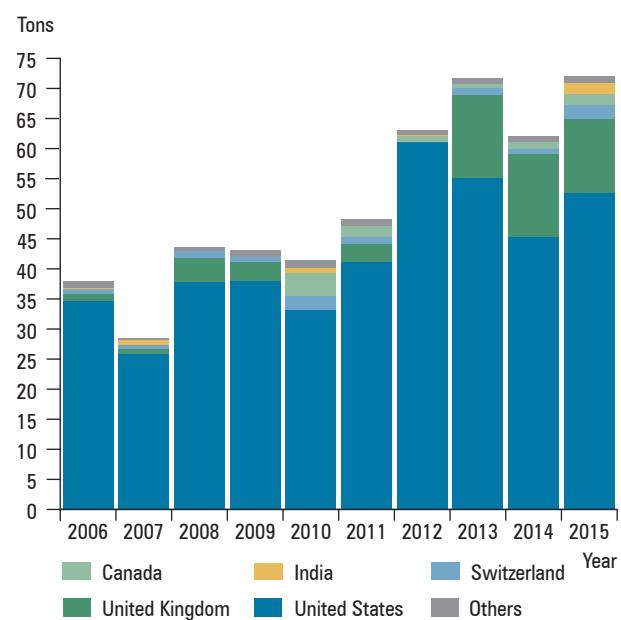

United States, where it was either converted into non-controlled substances or separated into levomethamphetamine and metamfetamine. Global stocks of metamfetamine racemate increased to 4 tons in 2015, with the majority of (97 per cent) held by the United States and the remainder by France (3 per cent).

Methylphenidate

18. The use of methylphenidate for medical purposes increased significantly in the 1990s. Methylphenidate is used for the treatment of ADHD, primarily in children. It is also prescribed for the treatment of narcolepsy. The increase in the manufacture and use of methylphenidate is mainly the result of developments in the United States, where the substance is frequently prescribed for the treatment of ADHD and is also heavily advertised, including directly to potential consumers. Since 2000, however, the use of methylphenidate for the treatment of ADHD has been rising sharply in many other countries. In recent years, concerns have been raised in some countries about the increasing misuse of preparations containing methylphenidate.

19. Global manufacture of methylphenidate started to rise rapidly in the 1990s. It reached a record level of almost 72 tons in 2013. After dropping to 62 tons in 2014, global output increased considerably in 2015, reaching 72 tons, the highest level since the 1990s (see figure 4). That significant increase was mainly the result of a sharp rise in output by the United States. Since the 1990s, the United States has been the leading manufacturer of methylphenidate, increasing its output from 1.8 tons in 1990 to 10 tons in 1995 and then gradually increasing it further, to 61 tons in 2012. Manufacture of methylphenidate in the United States increased from 45 tons in 2014 to 53 tons in 2015, accounting for 73 per cent of global output. The increase in output by the United States has been slightly offset by a reduction in manufacture reported by the United Kingdom, the second major manufacturer of methylphenidate since 2013. In 2015, the United Kingdom reported about 12 tons of manufacture of the substance, equivalent to 17 per cent of global output. Other countries reporting manufacture of methylphenidate in amounts exceeding 500 kg in 2015 were Switzerland (2,351 kg), India (1,942 kg), Canada (1,665 kg) and Spain (683 kg); their combined output accounted for 9 per cent of global manufacture. Most of the methylphenidate manufactured in the United States continued to be used domestically, although exports from that country have increased in recent years. Global stocks of methylphenidate have followed a similar trend to that for manufacture, rising to 70 tons in 2015. The United States accounted for 73 per cent of global stocks at the end of 2015, followed by Switzerland (10 per cent), Germany (5 per cent) and Canada (4 per cent).

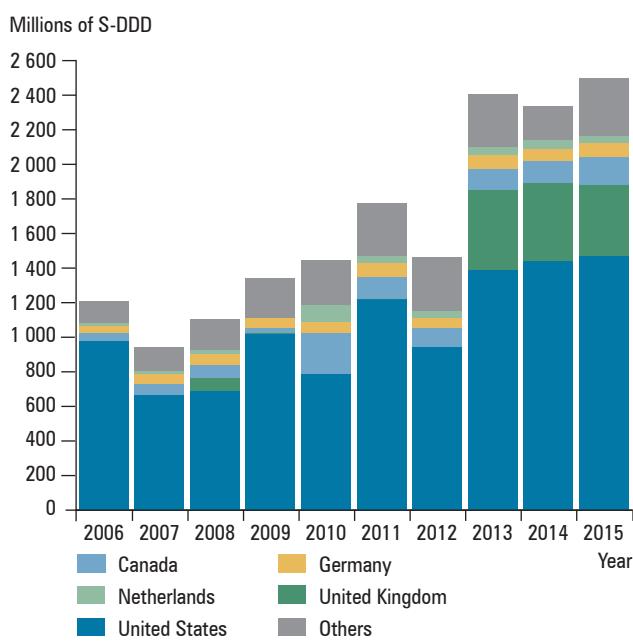

Figure 4. Methylphenidate: total reported manufacture, by country, 2006–2015

20. Despite the fact that manufacture of methylphenidate has spread to several other countries, the medical requirements for methylphenidate outside the United States continue to be met mainly by imports. International trade in methylphenidate increased from 920 kg to 33 tons during the period 1994–2014. Switzerland was the main exporter of methylphenidate until 2006. Since 2007, however, the United States has been the leading exporter; it accounted for 32 per cent (8 tons) of total exports in 2015 (26 tons). Other major exporting countries in 2015 were (in descending order) Switzerland (32 per cent), Spain (9 per cent), Germany (9 per cent) and India (8 per cent). The number of countries and territories importing methylphenidate for domestic consumption has remained significant. In 2015, of the 82 countries and territories that reported imports of methylphenidate, 40 had imported the substance in amounts exceeding 10 kg.

21. Over the past decade, the calculated consumption of methylphenidate (expressed in S-DDD per 1,000 inhabitants per day) for most countries followed a generally upward trend. In 2015, Iceland continued to be the country with the highest level of calculated consumption (18 S-DDD per 1,000 inhabitants per day), followed by the United Kingdom (16 S-DDD per 1,000 inhabitants per day), the United States (13 S-DDD per 1,000 inhabitants per day) and Canada (13 S-DDD per 1,000 inhabitants per day) (see figure 5). Calculated consumption of methylphenidate in those countries had slight fluctuations between 2013 and 2015 but not enough to impact on the ranking of those countries.

Figure 5. Methylphenidate: calculated consumption, by country,^a 2006-2015

^a Statistical data submitted by Governments are used to calculate the approximate consumption in a given year, expressed in S-DDD per 1,000 inhabitants per day.

22. The countries and territories with the highest levels of reported and calculated consumption of methylphenidate (calculated on the basis of statistics provided by Governments for 2013, 2014 and 2015) are listed in tables 3 and 4, respectively, in descending order of their level of consumption in 2015 (expressed in S-DDD per 1,000 inhabitants per day).

Anti-emetics

delta-9-Tetrahydrocannabinol and its stereochemical variants

23. Global manufacture of *delta*-9-THC gradually decreased from 114 kg (3.8 million S-DDD) in 2009 to 54 kg (1.8 million S-DDD) in 2012, led by a decrease in

manufacture by the United States, the main manufacturer of the substance worldwide. In 2013, global output rose, to 90 kg (3 million S-DDD). In 2014, it rose further, to 281 kg (9.4 million S-DDD). Global output reached 410 kg in 2015, with the United States and Switzerland together accounting for 88 per cent, and Germany for the remainder. International trade in *delta*-9-THC dropped from 48 kg in 2012 to 10 kg in 2014 and increased sharply in 2015 to 241 kg. This development may be a result of the development of a new pharmaceutical formulation (liquid THC). Colombia was the main importer of the substance (192 kg) and Switzerland the main exporter (43 kg) in 2015.

24. The United States was the world's largest consumer of *delta*-9-THC, with reported consumption of 111 kg in 2015, followed by Austria (4.4 kg) and Germany, which reported consumption of 3.4 kg. At the end of 2015, global stocks stood at 467 kg, of which 545 kg were held by the United States, 128 kg by Switzerland and 18 kg by Germany.

Sedative-hypnotics

25. Of the four substances from the group of sedative-hypnotics in Schedule II, three of them, namely *gamma*-hydroxybutyric acid (GHB), mecloqualone and methaqualone, are neither barbiturates nor benzodiazepines. While mecloqualone has been listed in Schedule II since the adoption of the 1971 Convention, methaqualone, initially placed in Schedule IV, was moved to Schedule II in 1979 because of information gathered over the years indicating its increased abuse potential and decreased medical usefulness. Neither mecloqualone nor methaqualone is used in medical practice today. GHB, which was added to Schedule IV in 2001, was transferred to Schedule II in 2013. Secobarbital, the only barbiturate in Schedule II, was moved from Schedule III to Schedule II in 1988.

gamma-hydroxybutyric acid

26. GHB is used in the treatment of narcolepsy and, more rarely, alcoholism. The substance is also used in the production of a variety of industrial polymers. After a significant drop in 2011, reported manufacture of GHB increased steadily during the period 2012-2014 and reached 69.1 tons in 2015, the highest amount ever recorded for that substance. Throughout the period, the United States remained the leading manufacturer, with reported manufacture of 47.7 tons in 2015, followed by Switzerland (12.7 tons), Germany (7.1 tons) and the Russian Federation (1.3 tons). Global stocks rose from 26.4 tons in 2013 to 45.5 tons in

2014, and reached 45.6 tons in 2015. The United States and Switzerland remained the main holders of GHB stocks, with 17.2 tons and 12.8 tons, respectively, in 2015, followed by Ireland (11.2 tons) and Ukraine (1.4 ton).

27. In 2015, total global reported imports of GHB amounted to 27.8 tons, a substantial increase compared with 2014, when global imports reached 11 tons. Altogether, 16 countries reported imports of GHB in 2015, with Ireland the main importing country (11.3 tons), followed by Italy, France and Spain (in descending order). The lead exporting country was Switzerland, which reported exports of 11.2 tons in 2015. Total calculated consumption also increased substantially, from 37.3 tons in 2014 to 68 tons in 2015. The United States reported having consumed 41.2 tons of GHB, while the Netherlands reported 713 kg, followed by Canada (612 kg) and Ukraine (531 kg).

Secobarbital

28. Germany has been the main manufacturer of secobarbital since 2000, with an average annual output of around 820 kg for the past 10 years. However, its manufacture dropped to zero in 2014, leaving Japan as the sole manufacturer of the substance (2 kg). In 2015, Germany again reported manufacture of the substance (1.68 tons), which increased the global total manufacture of secobarbital to 1.76 tons. The United States (76.1 kg) and Japan (4.4 kg) were the only countries other than Germany that reported manufacture of secobarbital in 2015. Following a similar trend, global stocks increased from 632 kg in 2014 to 1.75 tons in 2015, with Germany holding 57 per cent of those stocks, followed by the United Kingdom, the United States and the Netherlands.

29. Total exports of the substance decreased by 17 per cent in 2015, in comparison with 2014. Exports amounted to 686.5 kg in 2015, with Germany being the main exporting country (684 kg). Imports of secobarbital substantially decreased, from 825.5 kg in 2014 to 71.74 kg in 2015. The main importing countries were Sweden (53 kg), Ireland (6.7 kg) and Canada (4.6 kg). With regard to total calculated consumption, Germany, Sweden and the United States were the main users.

Antitussives

Zipeprol

30. The Republic of Korea, which had stopped manufacturing zipeprol in 1999, resumed manufacture of the

substance in 2008 and 2009, mainly for domestic consumption. Between 2010 and 2013, no manufacture of zipeprol was reported. Manufacture of the substance was resumed in the Republic of Korea in 2014 (200 kg). However, 2015 data for the country were not available during the preparation of the present report. The Plurinational State of Bolivia, the main importer of the substance in previous years, reported consumption of 1.4 kg in 2015. No international trade of the substance has been reported since 2013.

Antidepressants

Amineptine

31. The only substance representative of the group of antidepressants is amineptine, which was included in Schedule II of the 1971 Convention in 2003. Global stocks of the substance stood at 18 grams at the end of 2015, all held by Canada. No manufacturing or trading activities related to amineptine have been reported in the past 10 years.

Substances in Schedule III of the 1971 Convention

32. Nine substances are listed in Schedule III of the 1971 Convention. According to the scheduling criteria adopted by the World Health Organization, substances in Schedule III are those whose liability to abuse constitutes a substantial risk to public health and which have moderate to great therapeutic usefulness. One substance, cathine, belongs to the group of central nervous system stimulants. Six substances belong to the group of sedative-hypnotics: four barbiturates (amobarbital, butalbital, cyclobarbital and pentobarbital), flunitrazepam and glutethimide. The two remaining substances, buprenorphine and pentazocine, belong to the group of analgesics.

2015, with Mexico being the top importing country (99 per cent of total imports).

Sedative-hypnotics

35. Classified as sedative-hypnotics, barbiturates used to be prescribed for the treatment of anxiety and stress and, in some cases, as anaesthetics for short surgery interventions (ultra-short-acting substances). Nowadays, they are used mainly as anti-epileptics or for their selective anticonvulsant property. Barbiturates differ in speed of onset, duration of action and potency. Like benzodiazepines, barbiturates encountered on the illicit market have usually been diverted from licit circuits rather than synthesized in clandestine laboratories.

Central nervous system stimulants

Cathine

33. Cathine is used as a stimulant and for industrial purposes. Manufacture of cathine fluctuated considerably during the period 2005-2011, varying between no output and a peak of 5.9 tons, which was reached in 2007. Until 2003, Germany was the only manufacturer of the substance. The one other country reporting manufacture of cathine in recent years was India. During the period 2012-2015, the only years in which manufacture of the substance was reported were 2013 and 2015. Global manufacture of the substance amounted to 2.6 tons in 2015, with almost all of it reported by India (2.6 tons) and the rest by Germany (12 kg). Following the same trend as for manufacture, global stocks of cathine increased to 1.6 tons at the end of 2015. They were held mainly by Mexico (904 kg, or 57 per cent of total stocks) and India (614 kg, or 38 per cent of total stocks).

34. Reported global exports dropped to slightly less than 2 tons in 2015, with India being the major exporting country (1,966 kg), followed by South Africa (16 kg) and Mexico (15 kg). Global imports of cathine decreased to 1.2 tons in

Amobarbital, butalbital, cyclobarbital and pentobarbital

36. During the period 2006-2015, global manufacture of amobarbital, butalbital, cyclobarbital and pentobarbital fluctuated. While it followed a decreasing trend in 2012 and 2013, it increased during the following two years. In 2015 alone, global manufacture of the four substances reached the highest level since 2006, 1.33 billion S-DDD. That increase was mainly due to a substantial increase in the manufacture of those substances in the United States, where manufacture reached a record high of over 1 billion S-DDD in 2015. In terms of individual substances, total manufacture of butalbital increased in 2015 and amounted to 0.9 billion S-DDD, compared with 0.53 billion S-DDD in 2014. At the same time, however, global reported manufacture of pentobarbital and amobarbital fell in 2015 (see figure 6). As in previous years, manufacture in China, Germany and the United States accounted for the bulk of the global total (91 per cent). Figure 7 reflects the share of total output accounted for by each of the main manufacturing countries during the period 2011-2015.

Figure 6. Barbiturates listed in Schedule III: total reported manufacture, by substance, 2006-2015

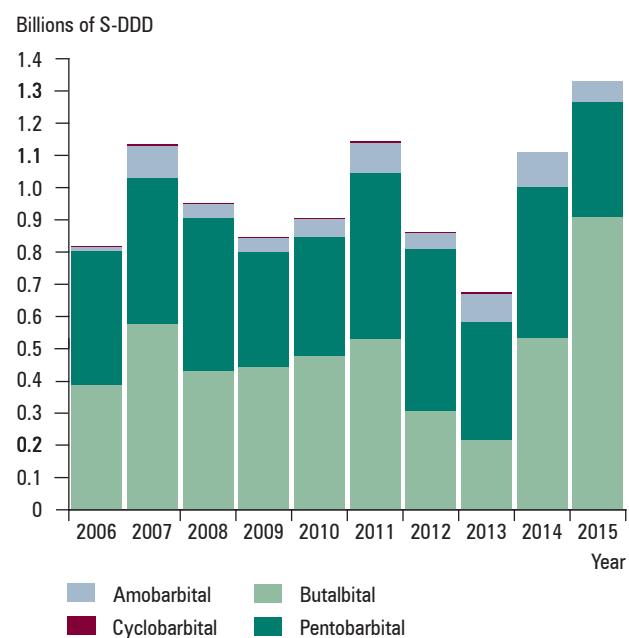

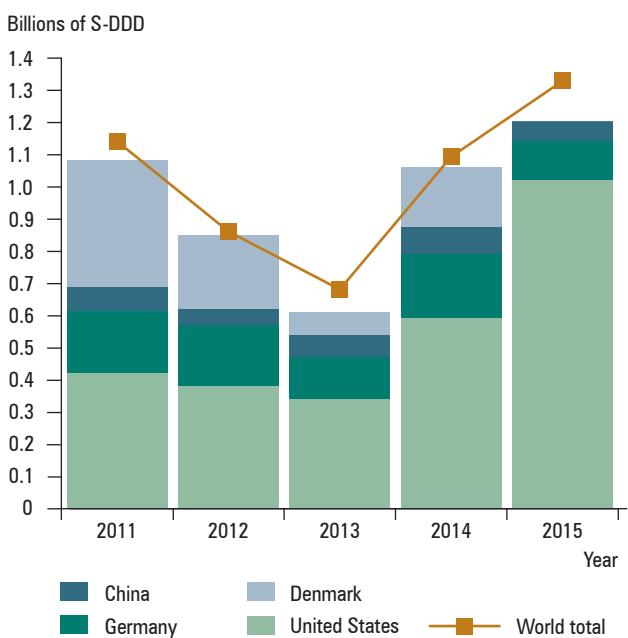

Figure 7. Barbiturates listed in Schedule III: total reported manufacture, selected countries, 2011-2015

37. Global manufacture of butalbital reached a record high of 68.3 tons (911 million S-DDD) in 2015, an increase of 70 per cent in comparison with 2014. In addition to the United States, which accounted for 88 per cent of global manufacture, only Belgium and Canada reported manufacture of the substance, in the amount of 8.1 tons and 341 kg, respectively. Total stocks also reached a record high of 48.8 tons, of which the United States held 78 per cent, followed by Belgium, Italy, Canada, Denmark, Switzerland, the Netherlands, Ireland, Germany and the United Kingdom (in descending order). In 2015, the largest users of butalbital were the United States, Italy, Canada, Belgium and Switzerland (in descending order).

38. The total volume of imports of butalbital in 2015 significantly decreased in comparison with 2014. That decline is mostly due to a lack of imports by the United States, which had been the leading importing country during the previous eight years. In 2015, the main importing country of butalbital was Italy, which reported imports of 1.9 tons of the substance. Similarly, exports in 2015 dropped by 94 per cent, owing to the fact that no exports were reported by the United States. Overall during that year, exports were made by Belgium, Denmark, Germany, Italy and the Netherlands.

39. Germany and the United States, the lead manufacturers of pentobarbital, decreased manufacture of the substance by 45 per cent and 12 per cent, respectively, in 2015, in comparison with 2014. There was a corresponding decline in global manufacture of pentobarbital, from 46.9 tons in 2014 to 35.5 tons in 2015. Similarly, the total

value of imports of pentobarbital dropped 37 per cent, from 33.5 tons in 2014 to 21 tons in 2015. The following countries reported imports of more than 1 ton in 2015: Australia, Denmark, Germany, the Netherlands, Spain and Switzerland. With total exports of 21.7 tons, Germany continued to be the leading exporter in 2015. Global stocks of pentobarbital continued to follow an increasing trend, reaching 50 tons in 2015.

40. Global manufacture of amobarbital fluctuated greatly during the period 2004-2014, averaging 9 tons per annum. In 2015, total output decreased by 41 per cent, to 6.3 tons. China continued to be the lead manufacturer; however, it decreased its manufacture of amobarbital in 2015 by almost 25 per cent. Global stocks reached 3 tons, and were held mostly by China (93 per cent). The total volume of imports significantly decreased, from almost 1.6 tons in 2014 to 1 ton in 2015, mainly because of a decrease in imports by Romania. Nevertheless, Romania continued to be the lead importer in 2015, accounting for 99 per cent of the global total. Following a slight increase in 2014, global exports decreased in 2015 by 33 per cent. China remained the main exporting country, accounting for 93 per cent of all exports, followed by Germany (the remaining 7 per cent). Total calculated consumption dropped in 2015 to 4.5 tons (over 45 million S-DDD), with China being the main consumer, followed by Romania.

41. Since 2004, cyclobarbital has been manufactured only in Poland. However, global manufacture of the substance dropped from 258 kg (1.3 million S-DDD) in 2013 to zero in 2014 and remained at zero in 2015, mainly because there

was no production in Poland. Nevertheless, imports increased by 29 per cent, owing to imports by the Russian Federation, Lithuania, Latvia, Georgia and Belarus (in descending order). Lithuania was the only exporting country in 2015; it exported 79 kg of cyclobarbital (393,000 S-DDD).

Flunitrazepam

42. Flunitrazepam remains one of the most frequently abused benzodiazepines. The substance is diverted mainly from domestic distribution channels. Preparations containing flunitrazepam have often been diverted from the licit market and smuggled into countries where there is an illicit demand for such preparations. Because it had frequently been diverted and abused, flunitrazepam was transferred from Schedule IV to Schedule III in 1995. Several countries, including major manufacturers and importers of the substance, have adopted strict control policies for flunitrazepam, in close cooperation with the pharmaceutical industry. Most of the preparations purportedly containing flunitrazepam that are sold on the illicit market are counterfeit products that do not contain that substance.

43. In medical practice, flunitrazepam, similarly to diazepam, has been used for pre-medication and for general anaesthesia. Prior to 1996, flunitrazepam was manufactured in several countries. After 1996, mainly Italy and Switzerland reported its manufacture, jointly accounting for over 96 per cent of total manufacture of flunitrazepam; smaller quantities were manufactured in Canada, Germany, India, Japan and the United States during the period 2011–2015. The manufacture of flunitrazepam in Switzerland, the main manufacturer of the substance, has fluctuated greatly; in some years, such as in 2010, 2011 and 2014, no manufacture of the substance took place in that country. That fluctuation is reflected in total global manufacture of flunitrazepam (see also para. 89 and figure 20 below), which in 2015 stood at nearly 2 tons, up from 497 kg reportedly manufactured in 2014. Switzerland accounted for 68 per cent of global manufacture of flunitrazepam in 2015, and held over 90 per cent of the 2.3 tons of global stocks of the substance.

44. International trade in flunitrazepam averaged around 1 ton per year during the period 2006–2015, and stood at 1.3 tons in 2015. Italy and Switzerland were the leading exporters of flunitrazepam, with exports of 685 kg and 512 kg, respectively, together accounting on average for 91 per cent of global exports of the substance in the past five years. More than 50 countries reported imports or use of flunitrazepam during the period 2011–2015. Japan remained the leading importer of flunitrazepam in 2015, importing 767 kg (767 million S-DDD), or 67 per cent of reported global imports of the substance. France, Nigeria, Germany, Switzerland and Brazil (in descending order) reported imports ranging from 33 kg to 185 kg, together

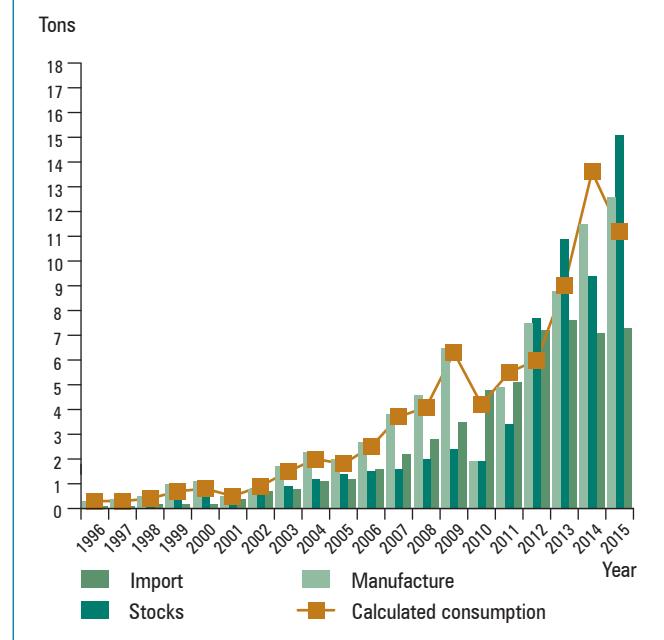

accounting for 30 per cent of global imports of the substance in 2015. Calculated global consumption of flunitrazepam increased by 11 per cent compared with 2014 and amounted to 1.1 tons (1.1 billion S-DDD) in 2015, most of which was consumed in Japan (784 million S-DDD). Measured in S-DDD per 1,000 inhabitants per day, Japan (17 S-DDD), France (8.6 S-DDD) and Belgium (1.9 S-DDD) had the highest calculated rates of consumption.

Analgesics

Buprenorphine

45. Buprenorphine belongs to the family of opioids used mainly as analgesics. As shown in figure 8, global manufacture of buprenorphine started to increase gradually in the late 1990s, as the substance began to be used in higher doses for the treatment of pain and opioid addiction. After a significant drop in 2010, global manufacture increased again and attained a new record of 12.6 tons (1.6 billion S-DDD) in 2015. Output was reported by eight countries, including the main manufacturing countries: United Kingdom (8.1 tons), Belgium (2.2 tons), Czechia (782 kg), United States (752 kg), Switzerland (422 kg) and India (312 kg). A sharp increase in global stocks of the substance was observed in 2015: 15 tons compared with 9.4 tons in 2014. The majority of the stocks were held in the United States, followed by the United Kingdom.

Figure 8. Buprenorphine: total reported manufacture, stocks, imports and calculated consumption,^a 1996–2015

^aStatistical data submitted by Governments are used to calculate the approximate global consumption in a given year, expressed in S-DDD.

46. The volume of trade in buprenorphine increased from 1994 until 2013, when it reached a total of 7.6 tons. During the 2014-2015 period, trade in buprenorphine averaged 7.2 tons. As in previous years, about 64 countries reported imports of the substance. Major importers in 2015 included the United States (4.4 tons), Germany (1.1 tons), France (672 kg), Spain (135 kg), Japan (129 kg) and Australia (126 kg). The main exporters in 2015 were Belgium (1 ton), Czechia (776 kg), Germany (679 kg), France (215 kg) and Australia (183 kg), which together accounted for 88 per cent of total global exports.

47. Global calculated consumption of buprenorphine has followed a generally upward trend since the early 2000s. After reaching a record of 13.6 tons (1.7 billion S-DDD) in 2014, global consumption decreased to 11.3 tons in 2015, owing to a sharp decrease in calculated consumption in the United States. Consequently, the United States (256 million S-DDD) became the second largest consumer in 2015, after the United Kingdom (773 million S-DDD). Other major consumers in 2015 were Belgium, France, Germany and Czechia, in descending order. The calculated consumption of buprenorphine in S-DDD per 1,000 inhabitants per day is shown in part three, table IV.5, of the present publication. However, the consumption reported by the United States, of 4.3 tons (540 million S-DDD), makes that country the leading consumer of buprenorphine in 2015. Buprenorphine is used in detoxification and substitution treatment programmes for opioid dependence in several countries, including Australia, Austria, Denmark, France, Germany, Hungary, Ireland, Malaysia, Switzerland and the

United States. Diversions of preparations of buprenorphine, mainly from domestic distribution channels, have been reported by a few countries. Abuse of the substance, particularly among opioid addicts, has also been reported.

Pentazocine

48. Pentazocine is an opioid analgesic with properties and uses similar to those of morphine. Global total manufacture of the substance fluctuated during the period 2005-2013, with a low of 2.9 tons (14.4 million S-DDD) in 2013 and a high of 8.5 tons (42 million S-DDD) in 2009, mainly as a result of fluctuations in the total output of India and Italy, the two major manufacturing countries. After the drop in manufacture observed in 2014 (1.1 tons), global manufacture of the substance increased again to nearly 3 tons in 2015. Of that, India accounted for 2 tons, or 67 per cent of the total. Major users of the substance in 2015 included (in descending order by amount used) Nigeria, India, Pakistan, the United States, Japan and China.

49. Global trade in pentazocine, which had shown a declining trend between 2009 and 2012, recovered in 2013 and stood at 2.5 and 2.6 tons in 2014 and 2015, respectively. The main importers in 2015 were Nigeria, Pakistan, the United States and India (in descending order by amount). Together, those countries accounted for 87 per cent of global imports in that year. India was the main exporter in 2015 (1.8 tons), followed by Italy (853 kg) and Switzerland (119 kg).

Substances in Schedule IV of the 1971 Convention

50. Sixty-one substances with various applications in medicine are listed in Schedule IV. They belong to the following groups: central nervous system stimulants (14 substances); benzodiazepine-type anxiolytics (22 substances); other anxiolytics (1 substance); benzodiazepine-type sedative-hypnotics (11 substances); benzodiazepine-type anti-epileptics (1 substance); barbiturate-type sedative-hypnotics and anti-epileptics (7 substances); other sedative-hypnotics (4 substances); and analgesics (1 substance).

Central nervous system stimulants

51. Fourteen central nervous system stimulants are listed in Schedule IV: amfepramone, aminorex, benzphetamine, etilamfetamine, fencamfamin, fenproporex, mazindol, mefenorex, mesocarb, pemoline, phendimetrazine, phentermine, pipradrol and pyrovalerone. The stimulants in Schedule IV are mainly used as anorectics or for the treatment of ADHD.

52. Reported manufacture of central nervous system stimulants in Schedule IV remained fairly stable during the period 2006-2010. Following an increase in 2011, manufacture steadily declined, to 1.9 billion S-DDD in 2014. In 2015, global manufacture of this group of substances increased again, to 2.1 billion S-DDD (see figure 9). Most of the major manufacturers of this group of substances, in particular Argentina, Brazil, Germany and Italy, reported increases in quantities manufactured in 2015. The only major manufacturing country reporting a reduction in manufacture was the United States. In 2015, manufacture in the United States accounted for 45 per cent of the global total, followed by Germany (37 per cent), Italy (10 per cent) and Argentina (5 per cent) (see figure 10).

53. As in previous years, phentermine was the most manufactured substance of this group of stimulants in 2015. In that year, manufacture of phentermine (1.9 billion S-DDD) accounted for 91 per cent of the total reported

Figure 9. Central nervous system stimulants in Schedule IV: total reported manufacture, by substance, 2006-2015

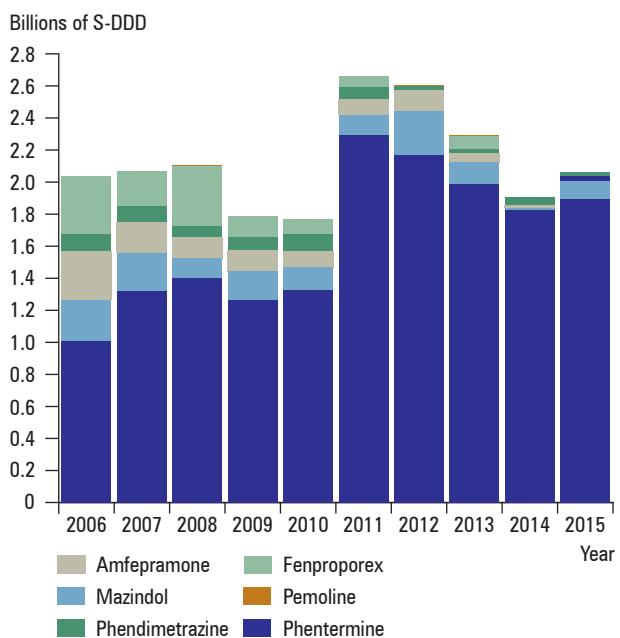

Figure 11. Central nervous system stimulants in Schedule IV: share of total reported manufacture, selected substances, 2015

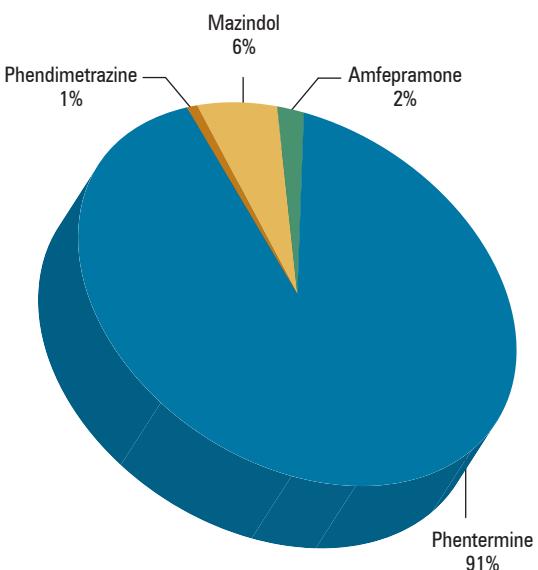

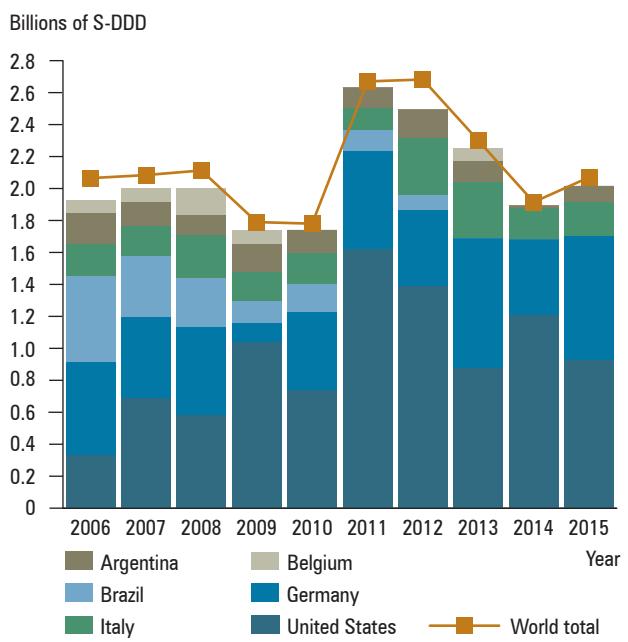

Figure 10. Central nervous system stimulants in Schedule IV: total reported manufacture, selected countries, 2006-2015

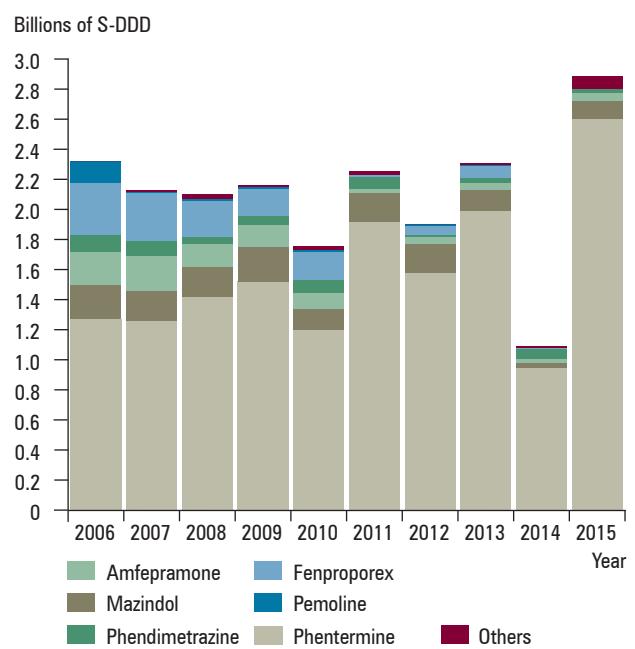

phendimetrazine (23 million S-DDD) accounted for about 1 per cent each of the global total (see figures 9 and 11). Reported manufacture of the other central nervous system stimulants in Schedule IV (benzphetamine, fencamfamin and pipradrol) each accounted for less than 1 per cent of total reported manufacture. No manufacture was reported for seven other stimulants in Schedule IV (aminorex, etilamfetamine, fenproporex, mefenorex, mesocarb, pemoline and pyrovalerone).

54. Calculated global consumption of central nervous system stimulants listed in Schedule IV increased considerably in 2015, to 2.9 billion S-DDD, the highest level of consumption recorded in the past 10 years. The significant rise in total calculated global consumption of these substances reflects mainly the increases in the use of phentermine in the United States and Germany and the use of mazindol in Argentina and Brazil (see figure 12). Of those stimulants, phentermine (2.6 million S-DDD) accounted for 90 per cent, followed by mazindol (183 million S-DDD, or 6 per cent), amfepramone (48 million, or 2 per cent) and phendimetrazine (31 million, or 1 per cent). About 85 per cent of global calculated consumption of stimulants in Schedule IV in 2015 was accounted for by the United States (2.4 billion S-DDD), followed by Argentina (3 per cent), Germany (3 per cent), Brazil (2 per cent), Chile (2 per cent) and New Zealand (1 per cent).

55. Calculated consumption in the Americas of the stimulants in Schedule IV remained the highest in the world during the period 2007-2015 (see figure 13). In 2015, levels

manufacture of all stimulants in Schedule IV, while the reported manufacture of mazindol (115 million S-DDD) accounted for another 6 per cent. The reported manufacture of amfepramone (32 million S-DDD) and

Figure 12. Central nervous system stimulants in Schedule IV: calculated global consumption,^a by substance, 2006-2015

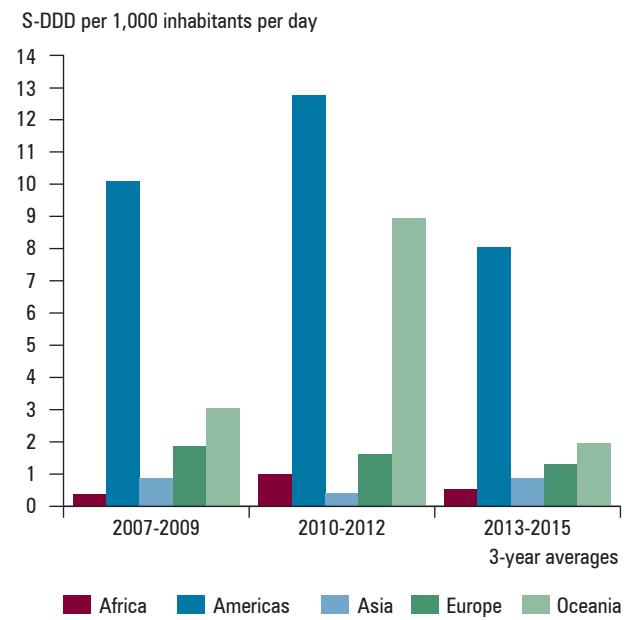

^a Statistical data submitted by Governments are used to calculate the approximate global consumption in a given year, expressed in S-DDD.

of consumption declined in Asia but increased in all other regions (the Americas, Europe, Oceania and Africa). The largest increase in consumption levels was in the Americas, and was attributable mainly to the rising consumption of phentermine (United States and Chile) and mazindol (Argentina and Brazil). In 2015, the highest consumption rates, expressed in S-DDD per 1,000 inhabitants per day, were reported by New Zealand (16.2 S-DDD), followed by the United States (11 S-DDD), Chile (8.9 S-DDD), Mexico (3.4 S-DDD), Costa Rica (2.0 S-DDD) and Argentina (1.4 S-DDD). Among the countries and territories that did not report consumption data, the highest calculated consumption rates, expressed in S-DDD per 1,000 inhabitants per day, were observed in China; Hong Kong, China (3.3 S-DDD); Germany (3.1 S-DDD); Czechia (2.8 S-DDD); South Africa (0.7 S-DDD); Israel (0.5 S-DDD); and Australia (0.4 S-DDD).

56. Phentermine has always been the most commonly manufactured substance in the group of stimulants in Schedule IV. During the period 2006-2015, total reported manufacture of the substance increased gradually, from 14 tons in 2005 to over 30 tons in 2011 and 2012. It then declined steadily, to 27 tons in 2014. Total output increased again in 2015, to 28 tons, a result of larger increases in Germany and Italy, which offset a reduction in the United States. In 2015, the United States (14 tons) accounted for 48 per cent of global output, followed by Germany (12 tons, or 41 per cent of the global total) and Italy (2.6 tons, or 9 per cent of the global total).

Figure 13. Central nervous system stimulants in Schedule IV: average national consumption,^a by region, 2007-2015

^a Statistical data submitted by Governments are used to calculate average annual consumption for each three-year period.

57. International trade in phentermine rose from 10.9 tons in 2010 to 18 tons in 2013, but decreased slightly in 2014 to 15 tons. Total exports increased to 17 tons in 2015, a result of an increase in exports from Germany, Italy and Australia. In recent years, the main exporter of the substance has been Germany, which reported more than half of global exports in 2015 (9.6 tons). Other major exporting countries included Italy, Australia, New Zealand, India and the United States (in descending order). The United States, which imported around 8 tons in 2015, has been the main importer of phentermine in recent years. Other major importers in 2015 included Australia, New Zealand, Mexico and Chile (in descending order). In 2015, imports of phentermine in quantities of more than 1 kg were reported by 26 countries and territories.

58. Argentina was the main manufacturer of mazindol in the decade leading up to 2015. It reported an annual average output of 140 kg of the substance during the period 2004-2013, but that dropped significantly to 15 kg in 2014. In 2015, global manufacture of mazindol rose to 115 kg, largely because of a significant rise in manufacture in Argentina (99 kg). Global stocks of the substance, however, decreased slightly, to 137 kg at the end of 2015 and were mainly held by Mexico (71 kg, or 52 per cent) and Brazil (62 kg, or 45 per cent). Total exports of mazindol decreased from 50 kg in 2014 to 29 kg in 2015, with Brazil accounting for 17 kg and Switzerland for 10 kg. Global imports of mazindol remained steady in 2015 and amounted to 41 kg, with Mexico (40 kg) being the major importer.

59. Total reported manufacture of amfepramone averaged 22 tons per year during the period 2004-2007, with Brazil, Italy and Switzerland being the main manufacturing countries. Global manufacture started to decrease in 2008, and dropped from 10 tons in 2012 to 1.4 tons in 2014. Global manufacture rose to 2.4 tons in 2015, mainly as a result of increased manufacture of the substance in Italy (1.5 tons) and the United States (772 kg). Global exports of amfepramone remained at around 2 tons in 2015, with Italy and the United States accounting for 54 per cent and 29 per cent, respectively. In 2015, the largest imports of amfepramone were reported by Mexico (615 kg), Germany (465 kg) and Chile (238 kg). Ten other countries reported imports of amfepramone in quantities of more than 1 kg in 2015.

60. Global manufacture of phenidmetrazine fluctuated, and showed a declining trend, from 7.6 tons in 2010 to 1.6 tons in 2015. That decrease reflected developments in Italy, the main manufacturer of phenidmetrazine during the period 2008-2015. Reported manufacture in that country, the largest manufacturer in 2015, dropped from 2 tons in 2014 to 1.5 tons in 2015. The United States, the second major manufacturing country in 2015, reported an output of 119 kg. Meanwhile, global exports decreased to 2 tons in 2015, with Italy being the only exporter. Only two countries reported imports of the substance in 2015: the United States (1.8 tons) and South Africa (14 kg).

61. During the period 2005-2014, the United States was the leading manufacturer of benzphetamine. Some manufacture was also reported intermittently by Ireland, Italy and Switzerland. Global manufacture dropped from 530 kg in 2014 to 282 kg in 2015; the United States (169 kg) and Italy (113 kg) accounted for all of it. International trade in benzphetamine increased in 2015, with only the United States reporting imports of the substance (130 kg). Only two countries reported exports of the substance: Italy (87 kg) and India (43 kg). As the leading consumer of benzphetamine during the period 2006-2014, the United States also reported consumption of 340 kg in 2015.

62. Almost no manufacturing or international trade of fencamfamin was reported during the period 2006-2014. In 2015, India was the only country reporting output of the substance (114 grams), mainly for domestic consumption. Global stocks of the substance stood at 13 grams at the end of 2015, with 9 grams held in Canada and the rest in the United States.

63. No manufacture or international trade of pipradrol was reported during the period 2006-2014. In 2015, Canada became the only manufacturer of the substance and reported an output of 79 kg, chiefly for its own consumption.

64. Global reported manufacture of fenproporex began to decline in 2005, from 9.5 tons in that year to 1.6 tons in

2013. There was no reported manufacture of that substance in 2015. Brazil, the world's leading manufacturer until 2011, did not report manufacture of fenproporex for the period 2013-2015. Total reported imports of the substance, which fluctuated greatly during the period 2005-2014, averaged 3.4 tons per year during the period 2006-2010, dropped to 313 kg in 2012, increased to over 2 tons in 2013, and then declined again to 24 kg in 2014. Global imports increased to 346 kg in 2015, with the main importing countries being Mexico (337 kg), Nicaragua (7 kg) and Panama (1.5 kg). Global stocks of the substance rose to 1.5 tons at the end of 2015, the majority of which were held in Mexico (54 per cent) and Germany (46 per cent).

65. During the period 2004-2012, global manufacture of pemoline fluctuated between 1.1 tons in 2004 and no manufacture during the period 2005-2007. In 2013, total manufacture increased to 401 kg, compared with 387 kg in 2012. No manufacture was reported in 2014 and 2015. Those fluctuations reflected developments in the Netherlands, which had been virtually the only country manufacturing pemoline after 2008, and which had also been the main exporter. Stocks of pemoline declined steadily, from 7.5 tons in 2004 to 62 kg in 2011, but then recovered and stood at 387 kg at the end of 2015, almost all held in the Netherlands. No international trade of the substance was reported for 2015.

Benzodiazepines

66. Thirty-three benzodiazepines were included in Schedule IV in 1984. Midazolam was added to Schedule IV in 1990 and brotizolam was added in 1995. Flunitrazepam was transferred from Schedule IV to Schedule III in 1995. During the decade ending in 2015, practically all countries and territories that reported to the Board manufactured or traded in benzodiazepines in quantities of more than 1 kg at least once. Benzodiazepines are frequently diverted for subsequent smuggling and abuse.

Benzodiazepine-type anxiolytics

67. Twenty-two benzodiazepines of diverse potency, with S-DDDs ranging from 0.75 to 100 mg, are generally classified as anxiolytics. During the period 2006-2015, total reported manufacture of this group of substances fluctuated between 18.3 billion and 29.9 billion S-DDD, averaging 24 billion S-DDD per year (see figure 14). That mainly reflected fluctuations in the manufacture of alprazolam, diazepam and lorazepam, the main substances in this group, which together accounted, on average, for over 80 per cent of the total in the past decade. Global reported manufacture of this group of substances amounted to 27.9 billion S-DDD

in 2015, 53 per cent more than in 2014. That rise was mainly the result of significant increases in reported manufacture of alprazolam by Finland, India, Italy and the United States.

68. In 2015, alprazolam accounted for 53.6 per cent (14.9 billion S-DDD) of total reported manufacture of benzodiazepine-type anxiolytics, lorazepam for 17.6 per cent (4.9 billion S-DDD), diazepam for 14.6 per cent (4.1 billion S-DDD), bromazepam for 4.4 per cent (1.2 billion S-DDD),

chlordiazepoxide for 2.1 per cent, fludiazepam for 1.8 per cent, oxazepam for 1.5 per cent and clobazam for 1.4 per cent (see figure 15). The remaining 14 substances in that group together accounted for 3 per cent of total reported manufacture. As shown in figure 16, Italy, India, the United States, Germany, Finland, China and Switzerland (in descending order) were the leading manufacturers of benzodiazepine-type anxiolytics during the period 2006-2015. As shown in figure 17, in 2015, Italy (8.4 billion S-DDD), India

Figure 14. Benzodiazepine-type anxiolytics: total reported manufacture, by substance, 2006-2015

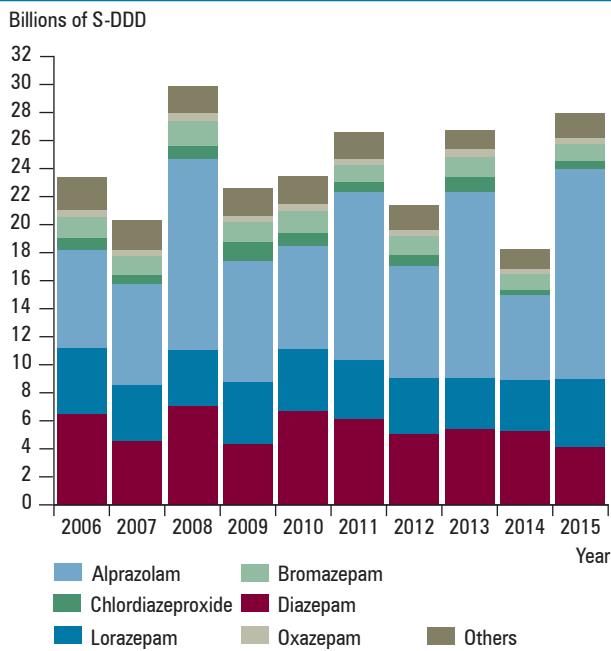

Figure 16. Benzodiazepine-type anxiolytics: reported manufacture, by country, 2006-2015

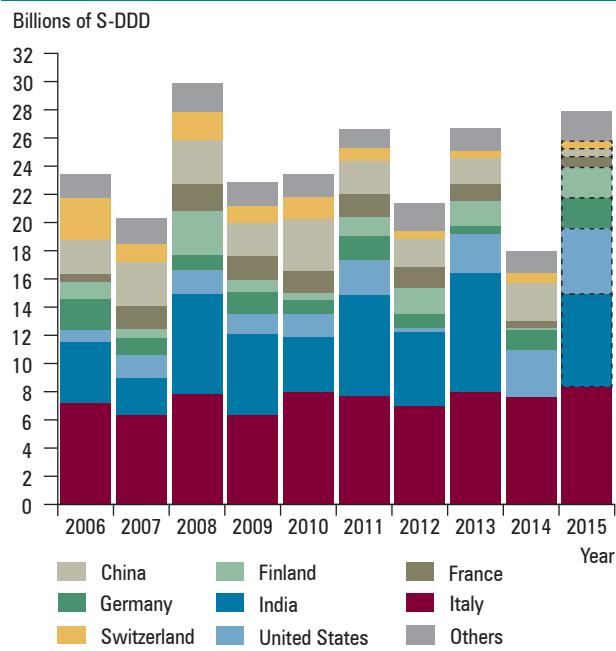

Figure 15. Benzodiazepine-type anxiolytics: share of total reported manufacture, by substance, 2015

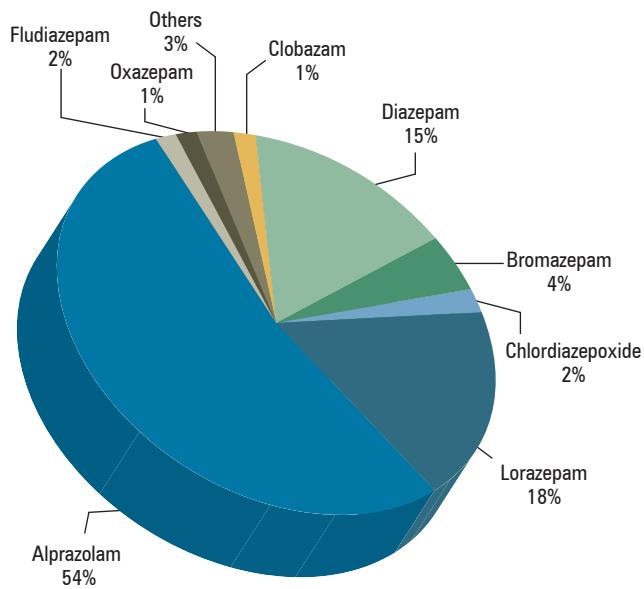

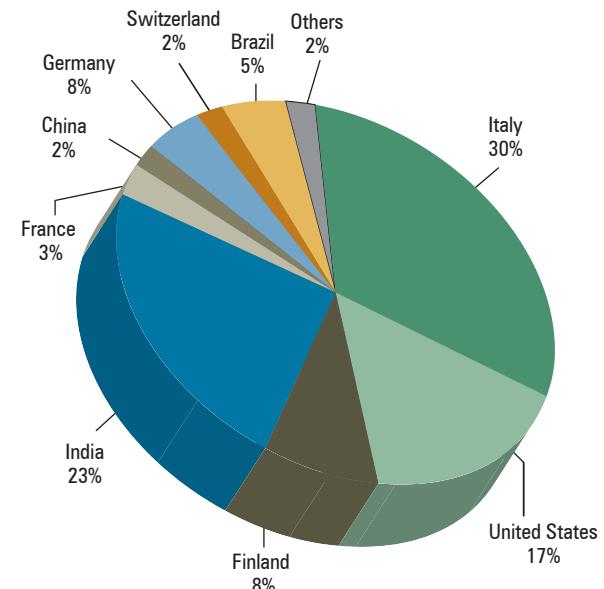

Figure 17. Benzodiazepine-type anxiolytics: share of total reported manufacture, by country, 2015

(6.6 billion S-DDD), the United States (4.6 billion S-DDD), Germany and Finland (2.2 billion S-DDD each) together accounted for 86 per cent of global manufacture of that group of substances.

69. Total approximate calculated consumption of benzodiazepine-type anxiolytics followed the overall trend in global manufacture, with alprazolam, diazepam and lorazepam being the most consumed substances. In 2015, calculated global consumption for this group of substances amounted to 27 billion S-DDD (see figure 18). The United States (9 billion S-DDD), France (1.9 billion S-DDD), Brazil (1.7 billion S-DDD), Spain (981 million S-DDD), Italy (930 million S-DDD), the Democratic Republic of the Congo (831 million S-DDD), Germany (780 million S-DDD), Argentina (766 million S-DDD), Ireland (714 million S-DDD), China (638 million S-DDD), Japan (636 million S-DDD), Iran (Islamic Republic of) (567 million S-DDD), Canada (544 million S-DDD) and Belgium (526 million S-DDD) were the largest consumers of this group of substances, in absolute terms. The calculated consumption of benzodiazepine-type anxiolytics, expressed in S-DDD per 1,000 inhabitants per day, is shown in part three, table IV.3, of the present publication. Finland (865 S-DDD), Ireland (427 S-DDD), Belgium (134 S-DDD), the Marshall Islands (98 S-DDD) and Croatia (94 S-DDD) had the highest rates of calculated consumption.

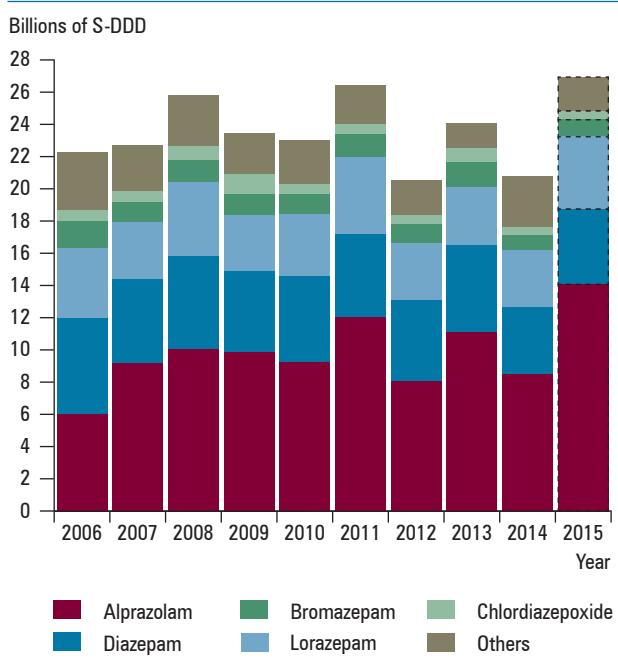

70. Average regional consumption indicators followed differing long-term trends during the past decade (see figure

19). The average regional rates of consumption, measured in S-DDD per 1,000 inhabitants per day averaged over three-year periods, increased in Africa (from 2.3 during 2007-2009 to 3.9 during 2013-2015) and in the Americas (from 24.4 to 29.4), but decreased in Asia (from 5 to 3) and in Europe (from 29.1 to 27). Average regional consumption rates in Oceania were very sensitive to occasional large imports of certain substances. The sharp increase in regional consumption rates in Oceania during the period 2010-2012, for example, is the result of a marked increase in imports and calculated consumption of alprazolam in Australia in 2011.

Alprazolam

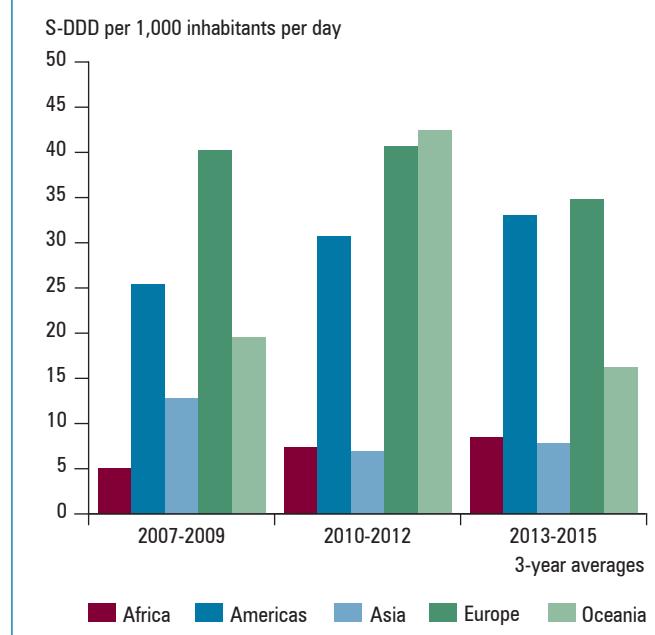

71. In 2015, total reported manufacture of alprazolam amounted to 15 tons (15 billion S-DDD), or two-and-a-half times the 6 tons recorded in 2014, owing mainly to significantly higher reported outputs in the main manufacturing countries. The main manufacturers of alprazolam in 2015 were the United States (4.6 tons), India (4.4 tons), Italy (2.6 tons) and Finland (2.1 tons), which together accounted for 92 per cent of global manufacture. They were followed by China (468 kg), France (464 kg), Brazil (206 kg), Japan (63 kg), Canada (30 kg) and the Russian Federation (7.5 kg). Global stocks of the substance in 2015 stood at 7.8 tons, which is 6 per cent lower than the annual average of 8.3 tons during the period 2013-2014. In 2015, the main countries holding stocks (in descending order) were the United States, Italy, Ireland, Brazil and Finland.

Figure 18. Benzodiazepine-type anxiolytics: calculated global consumption,^a 2006-2015

^aStatistical data submitted by Governments are used to calculate the levels of consumption for each year.

Figure 19. Benzodiazepine-type anxiolytics: average national consumption,^a by region, 2007-2015

^aStatistical data submitted by Governments and the total regional populations are used to calculate the average annual per capita consumption rate for each three-year period.

72. Alprazolam is available in many countries and all regions. In the four years preceding 2015, global exports exhibited a downward trend, gradually decreasing from 11.2 tons in 2011 to 9.1 tons in 2014. In 2015, global reported exports increased by 33 per cent, reaching 12.1 tons. India (4.8 tons), Italy (3.8 tons) and the United States (888 kg) were the main countries reporting exports of the substance in 2015; together, they accounted for 78 per cent of global exports. Ninety-seven countries reported imports of the substance during 2015. The main importers of alprazolam (mainly for re-export) continued to be the United States (2.7 tons), Italy (1.5 tons), India (840 kg), Belgium (814 kg), Ireland (801 kg) and Argentina (523 kg). Calculated global consumption increased from an annual average of 9.3 billion S-DDD during the period 2006-2014 to over 14 billion S-DDD in 2015. The countries with the largest calculated consumption of alprazolam in absolute terms in 2015 were the United States (7.8 billion S-DDD), Finland (1.6 billion S-DDD), Argentina (500 million S-DDD), Brazil (426 million S-DDD), France (367 million S-DDD) and Belgium (342 million S-DDD). Measured in S-DDD per 1,000 inhabitants per day, Finland (791 S-DDD), Ireland (111 S-DDD), Belgium (87 S-DDD), the United States (68 S-DDD), Croatia (37 S-DDD) and Argentina (33 S-DDD) had the highest rates of calculated consumption.

Lorazepam

73. Total reported manufacture of lorazepam was fairly stable during the period 2006-2014, averaging 10.4 tons per year, before increasing by 18 per cent to 12.3 tons (4.9 billion S-DDD) in 2015. In the recent past, Germany, India and Italy were the three main manufacturers of the substance. In 2015, Germany accounted for 42 per cent of total output, followed by Italy (39 per cent) and India (14 per cent). Global reported stocks of lorazepam stood at 8 tons in 2015, and were held mainly in the United States (2.4 tons), Italy (1.8 tons), Ireland (764 kg) and Brazil (629 kg).

74. In 2015, total reported exports of lorazepam stood at 10.7 tons, 7 per cent lower than in 2014. The main exporters of lorazepam in 2015 were Italy, Germany, India, Belgium and Switzerland (in that order), which together accounted for approximately 97 per cent of total exports of the substance. More than 80 countries and territories reported imports of lorazepam for 2015, the main importers being the United States (2 tons), Ireland (1.1 tons), Spain (1 ton), Germany (960 kg), Belgium (875 kg), Italy (707 kg) and India (669 kg), which together accounted for 67 per cent of all reported imports of the substance. During the period 2006-2015, calculated global consumption averaged 4 billion S-DDD per year. In 2015, it amounted to 4.5 billion S-DDD, with the highest levels being recorded for Germany (689 million S-DDD), the United States (664 million S-DDD), Ireland (512 million S-DDD), Spain (404 million S-DDD), France

(335 million S-DDD) and Canada (307 million S-DDD). In 2015, Ireland (307 S-DDD), Belgium and Portugal (26 S-DDD each), Canada (24 S-DDD) and Spain (23 S-DDD) had the highest calculated rates of consumption, measured in S-DDD per 1,000 inhabitants per day.

Diazepam

75. Diazepam continues to be the most traded substance in the group of benzodiazepine-type anxiolytics, and is consumed in all regions of the world. Together with alprazolam, it is among the benzodiazepines that are most often diverted and abused. In 2015, global reported manufacture of diazepam, which had been relatively stable during the previous three years at an average annual level of 52 tons, fell by 22 per cent, to fewer than 41 tons, its lowest level in the past decade. That was mainly the result of no manufacture being reported by China, which in 2014 had manufactured 21.5 tons of the substance. In 2015, Italy (23.6 tons), India (8.9 tons) and Brazil (7.3 tons) were the leading manufacturers, together accounting for 98 per cent of total reported manufacture. Global reported stocks of diazepam stood at 29 tons in 2015, which is 19 per cent lower than in 2014. They were held mainly in China, Brazil, Denmark, Italy, the United States, Switzerland and Mexico (in descending order).

76. International trade in diazepam gradually decreased from 63.3 tons in 2013 to 56.2 tons in 2015. Italy (23.3 tons), China (11 tons) and India (7.9 tons) remained the leading exporters of the substance in 2015, followed by Denmark, Switzerland, Germany and Czechia. Together, those countries accounted for 96 per cent of global exports in 2015.

77. Nearly all countries and territories imported diazepam at least once in the period 2006-2015. About 115 countries and territories reported imports of diazepam in 2015, the main importers being the Democratic Republic of the Congo (8.4 tons), Denmark (6.1 tons for re-export), the United States (6 tons), Switzerland (3.7 tons for re-export) and Ghana (3.1 tons). Calculated global consumption of diazepam gradually decreased throughout the past decade, from 6 billion S-DDD in 2006 to 4.3 billion S-DDD in 2014. This trend reversed, however, in 2015, with consumption increasing by 10 per cent to reach 4.7 billion S-DDD. The Democratic Republic of the Congo (838 million S-DDD), Brazil (700 million S-DDD), the United States (466 million S-DDD) and Ghana (305 million S-DDD) had the highest calculated consumption levels for diazepam in 2015. Measured in S-DDD per 1,000 inhabitants per day, the Marshall Islands (98 S-DDD), Croatia (43 S-DDD), the former Yugoslav Republic of Macedonia (34 S-DDD), the Democratic Republic of the Congo (33 S-DDD) and Ghana (32 S-DDD) had the highest calculated rates of consumption in 2015.

Bromazepam

78. During the period 2006-2015, total reported manufacture of bromazepam fluctuated significantly within a range of 10.8 tons (2014) to 18.3 tons (2008), averaging 13.9 tons per year. In 2015, total reported manufacture of bromazepam stood at 12.4 tons, the main manufacturers continuing to be Switzerland (5.2 tons) and Italy (4.9 tons), followed by India (1.4 tons), Brazil (625 kg) and China (210 kg). Global reported stocks of bromazepam have been fairly stable in recent years, averaging 15.2 tons per year during the period 2010-2015. Most of the stocks in 2015 were held in Switzerland, Brazil, Italy and India (in that order).

79. International trade in bromazepam was stable during the period 2006-2015. Global exports averaged 15.2 tons annually during the past three years. In 2015, as in previous years, the main manufacturing countries (Italy and Switzerland) were also the leading exporters of the substance, jointly accounting for 77 per cent of total exports. Eighty-four countries reported imports of bromazepam in 2015, with 21 of those countries reporting imports of more than 100 kg. Switzerland (1.6 tons, for re-export), France (1.6 tons, mainly for domestic consumption), Pakistan (1.2 tons) and Italy (1.2 tons, for re-export) remained the main importers of bromazepam in 2015, jointly accounting for 46 per cent of total reported imports. Five additional countries, namely Germany (938 kg), Japan (763 kg), Brazil (632 kg), Spain (375 kg) and Argentina (350 kg), accounted for 25 per cent of global imports during 2015. Calculated global consumption of bromazepam was fairly stable during the period 2006-2015, averaging 1.3 billion S-DDD. Total consumption stood at 1.1 billion S-DDD in 2015, with France (309 million S-DDD), Brazil (139 million S-DDD), Pakistan (122 million S-DDD), Japan (76 million S-DDD) and Italy (43 million S-DDD) having the highest levels of consumption in absolute terms.

Chlordiazepoxide

80. Total reported manufacture of chlordiazepoxide has fluctuated between 12.4 tons (2014) to 40.4 tons (2009); it averaged 24.6 tons during the period 2006-2015. In 2015, total manufacture of this substance stood at 17.3 tons (575 million S-DDD), which is 39 per cent higher than in 2014. Italy (8.9 tons), India (8.1 tons), Canada (178 kg) and China (134 kg) were the only countries that reported manufacture of chlordiazepoxide in 2015. Global reported stocks of this substance gradually decreased from 16.7 tons in 2013 to 10.4 tons in 2015, and were held mainly in China, Italy, India, the United States and Brazil (in that order).

81. Global exports of chlordiazepoxide declined from 20.2 tons in 2014 to 13.6 tons in 2015. Italy (8.7 tons), India (3.4 tons), China (352 kg) and Switzerland (313 kg)

were the largest exporters of the substance in 2015, jointly accounting for 94 per cent of the total. More than 100 countries reported imports of chlordiazepoxide during the period 2011-2015. Iran (Islamic Republic of) (2.4 tons), Pakistan (874 kg), Ghana (712 kg), Egypt (682 kg) and the United States (633 kg) were the main importers of the substance in 2015, accounting together for 62 per cent of the global total. Calculated global consumption of the substance fluctuated during the past decade, peaking at 1.2 billion S-DDD in 2009 and then again at 922 million S-DDD in 2013. In 2015, calculated global consumption increased by 12 per cent compared with 2014 and stood at 543 million S-DDD. The countries with the highest levels of consumption in 2015 were India (126 million S-DDD), Iran (Islamic Republic of) (80 million S-DDD) and China (71 million S-DDD), while the highest rates of consumption measured in S-DDD per 1,000 inhabitants per day were recorded for Iran (Islamic Republic of) (2.9 S-DDD), Ghana (2.5 S-DDD), the United Kingdom (2 S-DDD) and Jordan (1.9 S-DDD).

Oxazepam

82. During the period 2006-2013, total reported manufacture of oxazepam was fairly stable, averaging 24.5 tons per year. In 2014, global reported manufacture of the substance decreased to 19.6 tons. It then rose to 21.3 tons in 2015, reflecting changes in the amount of manufacture reported by Canada, India and Italy. Italy (17.5 tons), India (2.7 tons), Canada (854 kg), the United States (222 kg) and the Russian Federation (16 kg) were the only manufacturers of oxazepam in 2015. Global reported stocks decreased by 43 per cent in 2015 to 10 tons. The volume of trade in oxazepam was relatively stable during the period 2010-2015, averaging 24.8 tons per year, with Italy (19.1 tons), India (2.2 tons), Germany (2.1 tons) and South Africa (642 kg) being the main exporters in 2015. A total of 46 countries reported imports of oxazepam in 2015. The main importers, together accounting for 75 per cent of total global imports, were France (9.6 tons), Germany (2.9 tons), the Netherlands (1.4 tons), Canada and South Africa (1.1 tons each) and Australia (1 ton). Those countries were also the countries with the highest calculated consumption in 2015 in absolute terms. France (13.7 S-DDD), Croatia (8.5 S-DDD), Finland (6 S-DDD), Iceland (5.9 S-DDD) and the Netherlands (4.5 S-DDD) were the countries with the highest rates of calculated consumption in 2015, measured in S-DDD per 1,000 inhabitants per day.

Clobazam

83. Total reported manufacture of clobazam was stable during the period 2011-2013, averaging 6.5 tons per year. In 2014, it decreased to 4.3 tons and then increased by 79 per cent to 7.7 tons (385 million S-DDD) in 2015. India

(2.6 tons), France (2.5 tons) and Germany (2.3 tons) were the main manufacturers, and exporters, of the substance in 2015. Global reported stocks have followed a downward trend in recent years, decreasing gradually from 4.7 tons in 2012 to 3.2 tons in 2015, which were mainly held in Germany, India, Canada, the United States, Italy and Brazil (in that order). International trade in clobazam remained stable during the past two years, with reported global exports averaging 6.7 tons per year in 2014 and 2015. Sixty countries reported imports of the substance in 2015, including India (907 kg), France (842 kg), the United States (676 kg) and Brazil (532 kg).

Clorazepate

84. Total reported manufacture of clorazepate was lower in the second half of the past decade, decreasing from an annual average of 5.5 tons during the period 2006-2010 to an annual average of 3.9 tons during the period 2011-2015. In 2015, 3.7 tons (183 million S-DDD) of the substance were manufactured by four countries: France (2.2 tons), Italy (1.1 tons), Israel (260 kg) and Canada (11 kg). The United States accounted for 71 per cent of total reported stocks of clorazepate (2.5 tons) in 2015. International trade in the substance fluctuated, exhibiting a downward trend, from 10.6 tons in 2006 to 4.1 tons in 2015. France and Italy accounted for 75 per cent of total reported exports of the substance, while Spain (1.7 tons) and the United States (518 kg) were the main importers of clorazepate in 2015. Calculated global consumption of clorazepate remained stable at 182 million S-DDD per year, on average, during the period 2013-2015. France (80 million S-DDD) and Spain (49 million S-DDD) had the highest levels, as well as the highest rates, of calculated consumption (3.5 S-DDD and 2.9 S-DDD, respectively), when measured in S-DDD per 1,000 inhabitants per day.

Other anxiolytics

85. Until 2007, fludiazepam had been manufactured intermittently in Japan. Since then, Switzerland reported manufacture of 7 grams of the substance in 2012 and, in 2015, Brazil and India reported manufacture of 363 kg and 9 kg, respectively. In the past two years, total reported manufacture of delorazepam increased from 164 kg to 475 kg, and that of ethyl loflazepate decreased from 433 kg to 303 kg. In 2015, total reported manufacture of prazepam decreased by 38 per cent to 2.9 tons (95 million S-DDD). Total reported manufacture of clotiazepam also decreased sharply, dropping by 79 per cent from 5.5 tons in 2014 to 1.2 tons in 2015. In the past two years, Finland and France were the only manufacturers of nordazepam, total reported output of which gradually decreased from 14.2 tons in 2006

to 622 kg in 2015. Use of nordazepam remained limited to a very few countries, with Finland, France and Morocco (in descending order) together accounting for 99.8 per cent of calculated global consumption of the substance (154 million S-DDD). Total manufacture of ketazolam increased by 40 per cent in 2015, reaching 1.2 tons (39 million S-DDD), almost all of which was reported by Italy. Total reported manufacture of medazepam decreased from 2.8 tons in 2013 to an annual average of 715 kg during the period 2014-2015. Manufacture of cloxazolam also decreased in the past two years, from 675 kg in 2013 to 311 kg in 2015. Until 2009, Japan was the main manufacturer of oxazolam. In recent years, only China reported manufacture of the substance, with an output of 525 kg in 2015. Since 2007, India has been the sole manufacturer of pinazepam, reporting an output of 70 kg in 2015. For the first time since 1991, minor manufacture of camazepam took place in 2015, as Canada reported manufacture of 2 grams of the substance. No manufacture of halazepam and tetrazepam was reported in 2015.

Meprobamate

86. Meprobamate, the only non-benzodiazepine-type substance in Schedule IV used as an anxiolytic, has gradually been replaced by benzodiazepines, leading to a substantial decline in manufacture from 750 tons (625 million S-DDD) in the late 1970s to an annual average of 290 tons during the 1990s. During the period 2006-2012, total reported manufacture of meprobamate fluctuated around a lower annual average of 176 tons. Since then, total reported manufacture has declined sharply, primarily due to lower output in Denmark. It fell to 9 tons (7.5 million S-DDD) in 2014, but rose to 57 tons (48 million S-DDD) in 2015. Historically, China and Denmark were the main manufacturers of the substance, their combined output accounting for over 93 per cent of global manufacture during the period 2006-2012. In 2013, Denmark reported that its output had decreased to 375 kg from 40.2 tons in the previous year; it has not reported any manufacture since then. China remained the leading manufacturer of meprobamate, reporting 50 tons of manufacture in 2015, followed by India (7.4 tons). Global stocks have also continued to decrease since 2009. They stood at 34.1 tons (28.4 million S-DDD) in 2015, 68 per cent of which were held in South Africa (23.2 tons), 23 per cent in China (7.8 tons) and 3 per cent in Lebanon (1.2 tons).

87. International reported trade in meprobamate has also gradually declined, from an annual average of 205 tons during the period 2006-2012 to 15 tons in 2014, rising to 72 tons in 2015. China (54.4 tons) and India (15.9 tons) were the main exporting countries in 2015, jointly accounting for 97 per cent of global reported exports of meprobamate in that year. Other major exporters in 2015 included

Belgium (1.2 tons), South Africa (358 kg) and Denmark (302 kg). Only 16 countries reported imports of the substance in 2014 and 2015 (down from 34 importing countries in 2013), major importers being South Africa (47 tons), the Democratic Republic of the Congo (2.4 tons), India (2 tons), Tunisia (1.2 tons) and Belgium (1,172 kg for re-export). Calculated global consumption of meprobamate rose from 10.6 tons (8.9 million S-DDD) in 2014 to 33.9 tons (28.2 million S-DDD) in 2015, mainly due to increased consumption in South Africa. In that year, South Africa once again became the leading consumer of meprobamate, with 23.3 tons (19.5 million S-DDD), followed by France (3.9 tons) and the Democratic Republic of the Congo (2.4 tons).

Benzodiazepine-type sedative-hypnotics

88. Twelve benzodiazepines of differing potency, with an S-DDD range of 0.25 to 30 mg, are generally used as sedative-hypnotics: brotizolam, estazepam, flunitrazepam, flurazepam, haloxazolam, loprazolam, lormetazepam, midazolam, nimetazepam, nitrazepam, temazepam and triazolam. Comments on flunitrazepam, a substance that was transferred from Schedule IV to Schedule III in 1995, are provided in paragraphs 42-44 above.

89. During the decade leading up to 2015, total reported manufacture of the 12 substances in the group of

benzodiazepine-type sedative-hypnotics was 7.6 billion S-DDD per year, on average, fluctuating between a low of 5.5 billion S-DDD in 2008 and a high of 9.6 billion S-DDD in 2009, owing to changes in reported outputs of the main manufacturing countries (Germany, Italy, Switzerland and United States). In 2015, reported global manufacture of benzodiazepine-type sedative-hypnotics amounted to 10.4 billion S-DDD (see figure 20), 40 per cent higher than in 2014, mainly because of increases in global reported manufacture of flunitrazepam, lormetazepam and triazolam. In 2015, the major manufacturers of this group of substances continued to be Italy (40 per cent), Germany (20 per cent), Switzerland (19 per cent), Japan (9 per cent) and China (5 per cent). Global stocks held by manufacturers increased by 33 per cent compared with 2014 and stood at 8.7 billion S-DDD in 2015, mainly held in Switzerland (29 per cent), Germany (28 per cent), Italy (15 per cent) and the United States (9.5 per cent). Calculated global consumption of this group of substances was less volatile than manufacture, fluctuating around an annual average of 7.8 billion S-DDD during the period 2006-2015. In 2015, calculated global consumption of benzodiazepine-type sedative-hypnotics stood at 7.9 billion S-DDD (see figure 21).

90. Averaged by regional grouping, countries in Europe continue to have the highest consumption rates, followed by (in decreasing order) Oceania, the Americas, Asia and Africa. The regional indicators of consumption rates, measured in S-DDD per 1,000 inhabitants per day and averaged

Figure 20. Benzodiazepine-type sedative-hypnotics: total reported manufacture, by substance, 2006-2015

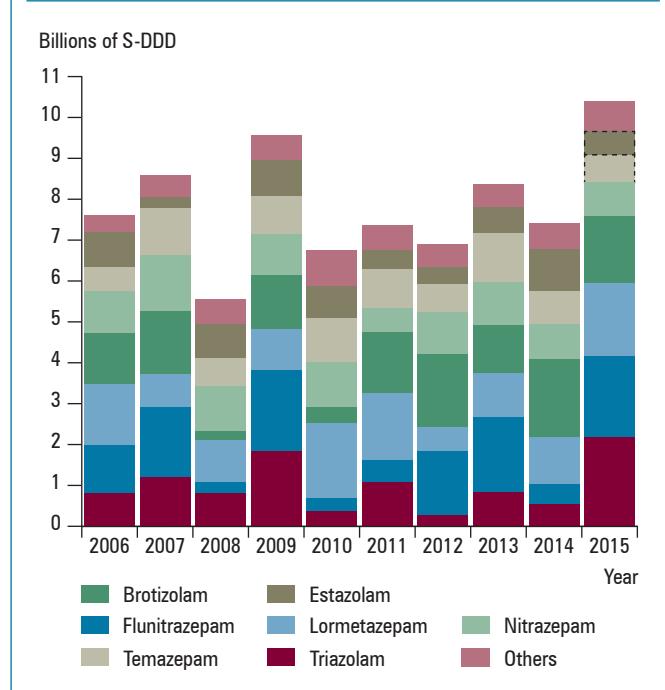

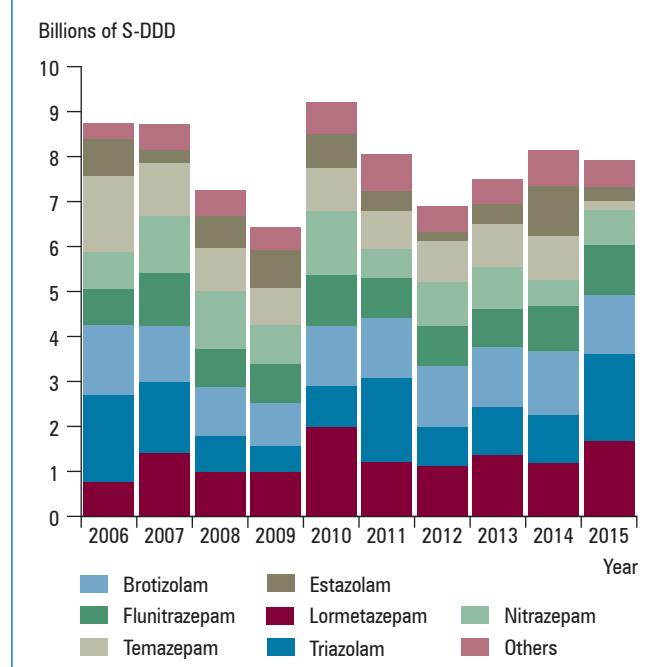

Figure 21. Benzodiazepine-type sedative-hypnotics: calculated global consumption,^a 2006-2015

^a Statistical data submitted by Governments are used to calculate the approximate global consumption in a given year, expressed in S-DDD.

over three years, demonstrated a slight decrease in consumption rates across all regions (see figure 22). Compared with the annual averages for the period 2010-2012, average annual regional consumption rates for the period 2013-2015 decreased by 21 per cent in Africa (from 0.27 to 0.21), by 5 per cent in the Americas (from 4.4 to 4.2), by 4 per cent in Asia (from 2.3 to 2.2), by 5 per cent in Europe (from 11.3 to 10.7) and by 18 per cent in Oceania (from 6.4 to 5.2). Calculated consumption rates for benzodiazepine-type sedative-hypnotics in individual countries, expressed in S-DDD per 1,000 inhabitants per day, are shown in part three, table IV.2, of the present publication.

91. The reported manufacture of individual substances in this group has varied greatly over the years, since manufacturers tend to occasionally produce large quantities of a substance at one time in order to keep stocks on hand for future use. There have been significant fluctuations in total manufacture of brotizolam, flunitrazepam and lormetazepam, in particular, which has affected the total level for the group as a whole. In 2015, triazolam was the most manufactured substance in the group of benzodiazepine-type sedative-hypnotics, accounting for 2.2 billion S-DDD, or 21 per cent of global manufacture of this group of substances (see figure 23). Flunitrazepam was second, with an output of almost 2 billion S-DDD, or 19 per cent of global

manufacture in 2015. Lormetazepam was third (1.8 billion S-DDD), followed by brotizolam (1.6 billion S-DDD), nitrazepam (818 million S-DDD), temazepam (681 million S-DDD), midazolam (578 million S-DDD) and estazolam (572 million S-DDD). The remaining four substances in this group — flurazepam (90 million S-DDD), loprazolam (82 million S-DDD), haloxazolam (3.3 million S-DDD), and nimetazepam (1.3 million S-DDD) — together accounted for 1.7 per cent of total manufacture in 2015.

92. The main countries reporting manufacture of benzodiazepine-type sedative-hypnotics during the decade up to 2015 are shown in figure 24. Throughout that period, Italy was the leading manufacturer, accounting on average for over 38 per cent of annual global output of this group of substances. In 2015, Italy manufactured benzodiazepine-type sedative-hypnotics amounting to 3.2 billion S-DDD, which accounted for 31 per cent of global manufacture of such substances (see figure 25). While the volume of output compared with 2014 was stable in Italy, manufacture in 2015 increased by 37 per cent in Germany (2.1 billion S-DDD), and was nearly six times as large in the United States (2 billion S-DDD) and almost 10 times as large in Switzerland (1.4 billion S-DDD). At the same time, manufacture in China decreased by more than 50 per cent (503 million S-DDD).

Figure 22. Benzodiazepine-type sedative-hypnotics: average national consumption,^a by region, 2007-2015

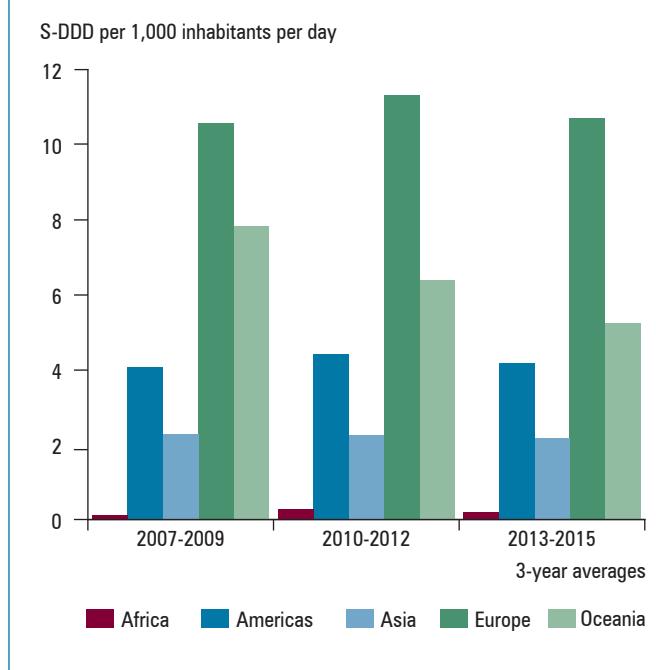

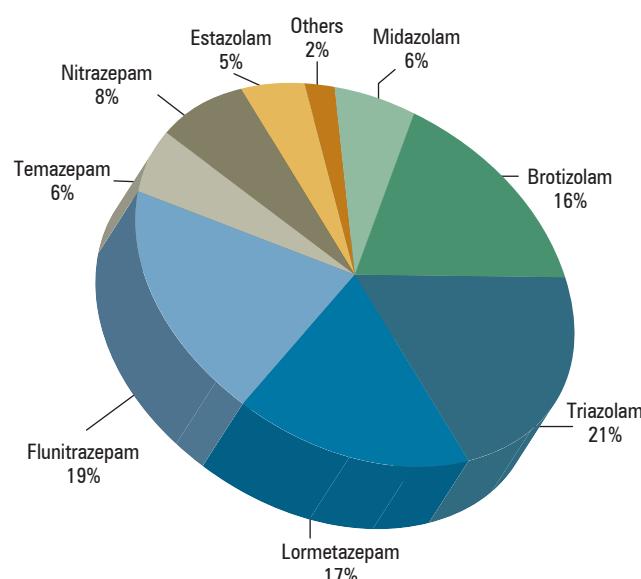

Figure 23. Benzodiazepine-type sedative-hypnotics: share of total reported manufacture, by substance, 2015

^a Statistical data submitted by Governments and the total regional populations are used to calculate the average annual per capita consumption for each three-year period.

Figure 24. Benzodiazepine-type sedative-hypnotics: total reported manufacture, by country, 2006-2015

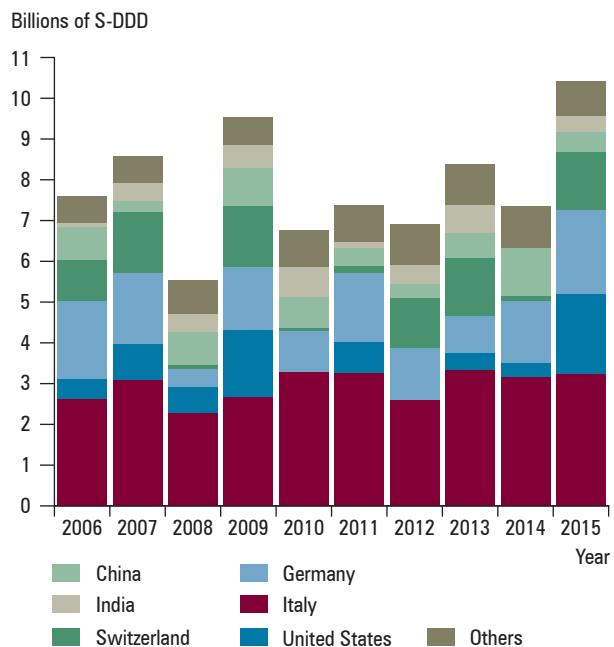

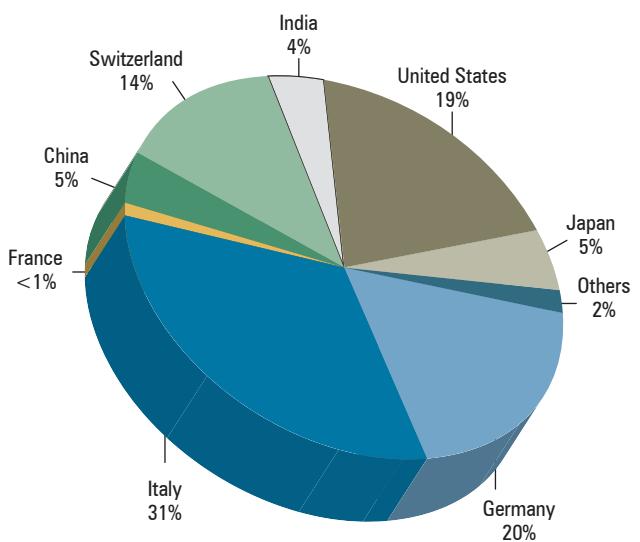

Figure 25. Benzodiazepine-type sedative-hypnotics: total reported manufacture, by country, 2015

Triazolam

93. Triazolam is a potent hypnotic. Together with brotizolam, it has the lowest S-DDD of all psychotropic substances (0.25 mg). Global reported manufacture of triazolam fluctuated significantly around an annual average of 989 million S-DDD during the period 2006-2015, mainly reflecting the quantities reported by the United States, the leading manufacturer of triazolam throughout the past decade. In 2015, manufacture of triazolam in the United States increased from 281 million S-DDD to 1.9 billion S-DDD. As a result, the global total more than quadrupled, to 2.2 billion S-DDD (547 kg) from 534 million S-DDD (133 kg) in 2014. The other countries reporting manufacture of triazolam in 2015 were Italy (53.3 kg), Japan (10.2 kg), Canada (2.9 kg), India (110 grams) and Ecuador (3 grams). International trade in triazolam increased by 6 per cent in 2015, exceeding 200 kg (804 million S-DDD). The United States (97 kg) continued to be the main exporter, followed by Italy (66 kg), Switzerland (16 kg), Belgium (9 kg), Canada (6 kg) and France (5 kg). More than 40 countries reported imports of triazolam during the period 2011-2015, the largest importer in 2015 being Ireland (88 kg). Throughout the decade prior to 2015, however, Japan had been the largest importer of the substance, accounting on average for 55 per cent of global imports. Total calculated consumption of triazolam almost doubled in 2015 and stood at 1.9 billion S-DDD, with the United States (1.1 billion S-DDD), Japan (300 million S-DDD) and Italy (96 million S-DDD) being the main consumers in absolute terms. Measured in S-DDD per

1,000 inhabitants per day, the United States (9.6 S-DDD), Austria (6.9 S-DDD), Japan (6.5 S-DDD) and Italy (4.3 S-DDD) had the highest calculated consumption rates for triazolam in 2015.

Lormetazepam

94. Total reported manufacture of lormetazepam increased by 61 per cent, from an annual average of 1.1 tons during 2013-2014 to 1.8 tons (1.8 billion S-DDD) in 2015. Historically, Germany and Italy have been the two main manufacturers and exporters of the substance. In 2015, these two countries reported manufacture of 818 kg and 970 kg, respectively. The only other country reporting manufacture of lormetazepam in 2015 was the United States (5 grams). Global stocks held by manufacturers remained stable during the past two years, amounting to 1.1 tons in 2015, and were held mainly in Germany (53 per cent), Italy (19 per cent) and Belgium (16 per cent). The volume of reported international trade during 2014 and 2015 also remained stable at around 1.6 tons. Italy (809 kg), Germany (283 kg), Finland (268 kg) and Spain (194 kg) jointly accounted for 98 per cent of global exports in 2015. Twenty countries reported imports of lormetazepam in 2015, the main importers being Spain (742 kg), Finland (176 kg), France (148 kg) and Belgium (145 kg). As in the past, some of those countries imported the substance mainly for re-export. Calculated global consumption, which was stable at an annual average of 1.2 tons per year during the period 2011-2014, increased by 40 per cent in 2015, reaching 1.7 tons (1.7 billion S-DDD). The rates of consumption

continued to be particularly high in Europe, with the highest calculated rates of consumption, expressed in S-DDD per 1,000 inhabitants per day, recorded for Belgium (41.6 S-DDD), Spain (32.1 S-DDD), Andorra (20.2 S-DDD), Italy (15.3 S-DDD) and Germany (9.4 S-DDD).

Brotizolam

95. Germany was the first country to report manufacture of brotizolam, in 1997. Since that year, the substance has usually been manufactured by Germany in amounts of several hundred kilograms per year and, to a much lesser extent, by Italy and Japan. Reported global manufacture of brotizolam decreased by 14 per cent, from 480 kg in 2014 to 411 kg in 2015. Germany (315 kg), Japan (97 kg) and Ecuador (3 grams) were the only manufacturers of the substance. Global reported stocks stood at 517 kg (2.1 billion S-DDD) in 2015, 19 per cent higher than in 2014. They were almost entirely held in Germany, which also remained the main exporter in 2015, accounting for 107 kg, or 69 per cent of total exports of the substance. Thirteen countries reported having imported brotizolam in 2015, with Japan being the biggest importer (78 kg), accounting for 52 per cent of total reported imports. Calculated global consumption of brotizolam stood at about 1.3 billion S-DDD in 2015, mainly by Japan (53 per cent) and Germany (40 per cent).

Nitrazepam

96. Italy, India, China and Canada (in descending order) were the main manufacturers of nitrazepam in the past decade. Reported global manufacture of this substance decreased in recent years from an annual average of 5.1 tons per year during 2012 and 2013 to 4.2 tons during 2014 and 2015. In 2015, global manufacture stood at 4.1 tons (818 million S-DDD), of which Italy accounted for 51 per cent and India for 42 per cent. The only other countries reporting manufacture of nitrazepam in 2015 were China (234 kg), Canada (51 kg), the Russian Federation (11.5 kg) and the United Kingdom (20 grams). Global stocks of nitrazepam increased by 8 per cent, from 2.1 tons in 2014 to 2.3 tons in 2015. Total reported exports stood at 2.9 tons in 2015, with Italy (2.2 tons), India (322 kg) and China (175 kg) being the main exporters of the substance. Forty-seven countries reported imports of nitrazepam in 2015. Japan (55 per cent), Brazil and Bangladesh (9 per cent each) and Nigeria (3.5 per cent) were the main importers. Calculated global consumption of nitrazepam, which amounted on average to 4.7 tons (947 million S-DDD) annually during 2012 and 2013, decreased to 2.8 tons in 2014 and then rose by 39 per cent to 3.9 tons (784 million S-DDD) in 2015. Measured in S-DDD per 1,000 inhabitants per day, Japan (6.9 S-DDD), Malta (3.4 S-DDD), Croatia (3.3 S-DDD), Ireland (3 S-DDD) and

Canada (2.1 S-DDD) had the highest rates of calculated consumption in 2015.

Temazepam

97. During the period 2006-2015, Italy was the leading manufacturer and exporter of temazepam, while Canada, India, Poland and the United States reported intermittent manufacture of the substance for some of those years. In the past three years, global reported manufacture of temazepam gradually decreased from 23.9 tons in 2013 to 13.6 tons in 2015, with Italy accounting for 87 per cent (11.8 tons) of the total. The only other manufacturers of the substance in 2015 were the United States (953 kg), Canada (802 kg) and India (50 kg). Global reported stocks of temazepam held by manufacturers stood at 12.7 tons in 2015 (a 20 per cent increase compared with 2014), held mainly in the United States, Italy, Canada, the United Kingdom and Ireland (in descending order). Global reported exports of temazepam gradually decreased from over 20 tons in 2012 to 12.2 tons in 2015. Twenty countries reported imports of temazepam in 2015, with Ireland, the Netherlands, Germany and Canada being the largest importers of the substance. Calculated global consumption of temazepam stood at 3.7 tons (184 million S-DDD) in 2015. Canada accounted for 40 per cent of the total, followed by the Netherlands (24 per cent), Finland (9.8 per cent), Austria (8.4 per cent) and Germany (5.8 per cent). According to reported statistics, measured in S-DDD per 1,000 inhabitants per day, Finland (9.2 S-DDD), the Netherlands (7.1 S-DDD) and Canada (5.9 S-DDD) had the highest calculated rates of consumption in 2015.

Midazolam

98. Reported global manufacture of midazolam, which was relatively stable at an average annual level of 6.3 tons during the period 2007-2014, increased by 49 per cent in 2015 to 11.6 tons (578 million S-DDD). Italy (5.4 tons), Switzerland (2.3 tons), Israel (1.4 tons), Brazil (1.2 tons) and India (901 kg) were the main manufacturers of the substance. Total reported stocks of midazolam almost doubled, reaching 10.1 tons in 2015, and were mainly held in Switzerland (53 per cent), Italy (11 per cent), Brazil (7 per cent) and Mexico (5 per cent). In 2015, reported global exports of the substance stood at 11.3 tons, which also represents a 42 per cent increase from the year before. As in previous years, Italy (3.9 tons), Switzerland (3.2 tons) and Israel (1.3 tons) continued to be the main exporters of midazolam, jointly accounting for 74 per cent of the global total. Midazolam is used in many countries; over 100 countries reported imports of the substance in 2015. The main importers in 2015 (all mainly for re-export) were Switzerland (4.8 tons), Germany (851 kg), Italy (849 kg) and Mexico (716 kg). Together, those countries accounted for

67 per cent of global imports of the substance. Calculated global consumption of midazolam has been stable in recent years, averaging 338 million S-DDD per year during the period 2010-2015. While Italy (79 million S-DDD), Brazil (63 million S-DDD) and France (25 million S-DDD) had the highest calculated consumption levels in absolute terms, Switzerland (4.4 S-DDD), Italy (3.5 S-DDD), Curaçao (2.5 S-DDD), the Marshall Islands (2.2 S-DDD) and Portugal (2.1 S-DDD) had the highest rates of calculated consumption of midazolam in 2015, measured in S-DDD per 1,000 inhabitants per day.

Estazolam

99. Reported global manufacture of estazolam fluctuated between 799 kg (2007) and 3.1 tons (2014), around an annual average of 2.1 tons, during the period 2006-2014. In 2015, reported global manufacture of this substance decreased by 44 per cent to 1.7 tons (572 million S-DDD), owing mainly to a significantly lower output reported by China. That country, which was the major manufacturer of the substance during the period 2006-2015, reported manufacture of 1.3 tons of estazolam in 2015, which represents a 46 per cent reduction compared with the year before. The only other countries reporting manufacture of estazolam in 2015 were Japan (198 kg), Italy (183 kg) and India (10 kg). Reported total stocks of the substance increased by 76 per cent in 2015 and amounted to 1.2 tons (395 million S-DDD), 82 per cent of which were held in China. Use of the substance outside of manufacturing countries has increased steadily since the 1980s, with international trade during the period 2011-2015 remaining stable at an average annual level of 396 kg. The leading exporters of estazolam have traditionally been Japan and Italy; in 2015, those two countries accounted for 56 and 38 per cent of global exports, respectively. Thirteen countries reported imports of estazolam in 2015. Outside Japan and Italy, who were also the biggest importers (for re-export), Mexico, Portugal, the United States and France (in decreasing order) jointly accounted for 41 per cent of total imports of the substance in 2015. After peaking at over 1.1 billion S-DDD in 2014, calculated global consumption of estazolam decreased by 70 per cent and stood at 1 ton (333 million S-DDD) in 2015, 88 per cent of which was accounted for by China. Measured in S-DDD per 1,000 inhabitants per day, Portugal (1.7 S-DDD), China (0.6 S-DDD), France (0.3 S-DDD), Italy (0.2 S-DDD) and Japan (0.15 S-DDD) had the highest rates of calculated consumption in 2015.

Flurazepam

100. Global reported manufacture of flurazepam stood at 2.7 tons (90 million S-DDD) in 2015, which is 25 per cent lower than the annual average of 3.6 tons reported during

2013 and 2014. Italy continued to be the largest manufacturer, accounting for 91 per cent of total output, followed by Canada and India. No other countries reported manufacture of the substance in 2015. Italy also remained the largest exporter of flurazepam in 2015, accounting for 74 per cent of global exports (3.2 tons). The main importer of flurazepam continued to be Spain (973 kg), followed by Germany (370 kg), Belgium (282 kg), Italy (205 kg, for re-export) and the United States (181 kg), which together accounted for 74 per cent of total imports of the substance in 2015. Rates of consumption continued to be higher in Europe, with the highest calculated rates of consumption in 2015, expressed in S-DDD per 1,000 inhabitants per day, recorded for Ireland (2.6 S-DDD), Belgium (2.2 S-DDD), Italy (1.3 S-DDD), Spain and Switzerland (1 S-DDD each).

Loprazolam

101. Total reported manufacture of loprazolam in 2015 amounted to 82 kg, all reported by France, which has traditionally been the main manufacturer and leading exporter of the substance. That country also accounted for around 90 per cent of global stocks. In the past decade, small quantities were occasionally manufactured by India, Switzerland, the United Kingdom and the United States. Global reported exports of loprazolam decreased by 38 per cent from their level in 2014 and stood at 124 kg in 2015. About 20 countries used loprazolam during the period 2011-2015, the main importing countries in 2015 being France (53 kg, for re-export), South Africa (21 kg), Italy (16 kg) and Spain (8 kg).

Other benzodiazepine-type sedative-hypnotics

102. The remaining substances in this group, haloxazolam and nimetazepam, are manufactured and used almost exclusively in Japan. In 2015, Japan reported manufacture of 24 kg of haloxazolam, up from zero in 2014. The sole manufacturer of nimetazepam was India (6.6 kg).

Benzodiazepine-type anti-epileptics

Clonazepam

103. Clonazepam is a benzodiazepine that is used mainly as an anti-epileptic. In the past decade, reported global manufacture of the substance fluctuated, increasing from an annual average of 9.1 tons per year during the period 2006-2010 to an annual average of 13 tons (1.6 billion S-DDD) during the period 2011-2013, then dropping to 7.8 tons in 2014, when no manufacture of clonazepam was reported by India. In 2015, reported global manufacture increased by more than 51 per cent to 11.8 tons

(1.5 billion S-DDD), owing to the fact that India reported output of more than 5 tons (43 per cent of the total). Brazil, Italy and Switzerland were the other traditional leading manufacturers of clonazepam during the past decade. In 2015, the combined outputs of Italy (2.2 tons), Switzerland (2.1 tons) and Brazil (1.3 tons) jointly accounted for 48 per cent of global manufacture of clonazepam (see figure 26).

104. Total reported stocks of clonazepam gradually increased during the past decade, from 5.1 tons in 2006 to 11.9 tons in 2015, with 82 per cent of global stocks held in Switzerland (4.6 tons), Brazil (1.8 tons), Mexico (1.33 tons), the United States (1.31 tons) and India (763 kg). Global exports of clonazepam also followed an upward trend, increasing from an annual average of 8.5 tons per year during the period 2006-2008 to an annual average of 11.9 tons during the period 2011-2015. India (4 tons), Switzerland (3.8 tons) and Italy (2 tons) continued to be the main exporters of clonazepam in 2015, together accounting for 83 per cent of the global total. More than 100 countries reported imports of clonazepam in 2015. Of those, four countries imported more than 1 ton of the substance, both for domestic use and for re-export: the United States (2.5 tons), Switzerland (1.5 tons), Brazil (1.4 tons) and Mexico (1.2 tons). Use of clonazepam expanded from about 50 countries in 1995 to more than 140 countries during the period 2006-2015. Calculated global consumption of the substance decreased by 20 per cent, from an annual average of 1.4 billion S-DDD per year during the period 2011-2014 to 1.1 billion S-DDD in 2015. The countries with the highest levels of calculated consumption of

clonazepam were the United States (309 million S-DDD), Brazil (288 million S-DDD), Argentina (81 million S-DDD), China (57 million S-DDD), Canada (36 million S-DDD) and Chile (32 million S-DDD). The rates of calculated consumption of clonazepam, measured in S-DDD per 1,000 inhabitants per day, in individual countries are shown in part three, table IV.4, of the present publication.

Barbiturate-type sedative-hypnotics and anti-epileptics

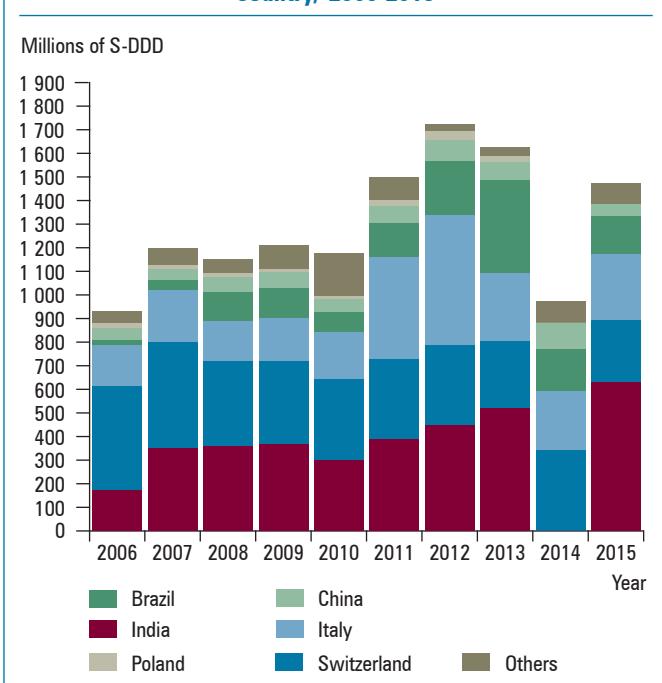

Allobarbital, barbital, butobarbital, methylphenobarbital, phenobarbital, secbutabarbital and vinylbital

105. The seven barbiturates in Schedule IV are pharmaco logically related to those in Schedule III. Five of the seven substances, namely, allobarbital, barbital, butobarbital, secbutabarbital and vinylbital, are intermediate-acting barbiturates and are used mainly as hypnotics (to induce sleep). They are no longer used as daytime sedatives. The other two substances, methylphenobarbital and phenobarbital, have additional properties and are used as anti-epileptics (long-acting barbiturates). Phenobarbital continued to be the most commonly used substance in this group in 2015, followed by barbital. More information on calculated consumption of phenobarbital is shown in part three, table IV, of the present publication.

106. Total annual reported manufacture of those seven barbiturates (for both direct medical use and the manufacture of non-psychotropic substances) rose from an average of 4 billion S-DDD in 1999 and 2000 to an average of 5.1 billion S-DDD during the period 2001-2006. After 2006, reported global manufacture started to decline, with fluctuations. While reported global manufacture increased in 2014, this trend was reversed in 2015, mostly due to a drop in the manufacture of phenobarbital, which continued to be the most widely manufactured substance in this group. At the same time, however, global reported manufacture of barbital, methylphenobarbital and secbutabarbital increased. No manufacture of allobarbital was reported for 2015, and no manufacture of vinylbital has been reported since 1996. Global stocks of these seven substances altogether reached 239.2 tons in 2015, with phenobarbital accounting for 79 per cent, followed by barbital (20 per cent).

107. In 2015, the countries and territories with the highest calculated consumption rates for barbiturate-type anti-epileptics listed in Schedule IV were (in descending order) China, Brazil, the United States, India and Ukraine. As regards the barbiturate-type sedative-hypnotics in Schedule IV, China, Italy, the United States and France (in

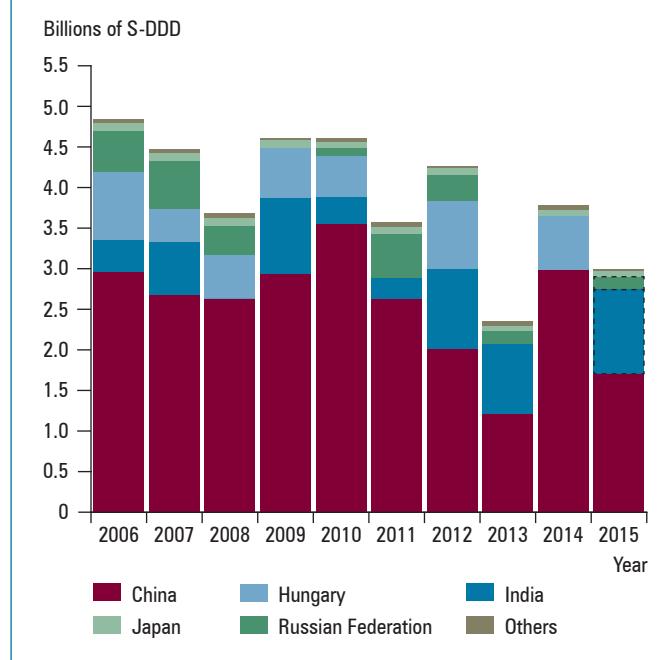

Figure 26. Clonazepam: total reported manufacture, by country, 2006-2015

descending order) had the highest calculated consumption levels, ranging between 0.25 and 0.001 S-DDD per 1,000 inhabitants per day. More information on calculated consumption is shown in part three, table IV, of the present publication.

108. The reported global level of manufacture of phenobarbital dropped in 2015 from 379 tons to 299 tons, amounting to less than 3 billion S-DDD, the lowest level since 2006. This drop represents a decrease of 21 per cent in comparison with 2014. In the period between 2006 and 2012, reported global manufacture on average amounted to 404.9 tons, with the highest amount recorded in 2006 (483.9 tons). After a drop in 2013 to a record low of 235 tons, manufacture went up in 2014 following a significant rise in the output of China and Hungary. At the same time, however, China decreased its manufacture of phenobarbital by almost 43 per cent (see figure 27) in 2015. Other countries that reported significant manufacture of phenobarbital in 2015 were India (103.7 tons), the Russian Federation (15.9 tons) and Japan (7.3 tons).

Figure 27. Phenobarbital: total reported manufacture, by country, 2006-2015

109. Phenobarbital continued to be one of the most widely traded psychotropic substances, with an average of 140 countries trading in it every year. China, India, Switzerland, Germany, Denmark and France (in descending order) together accounted for close to 99 per cent of total exports in 2015. Global reported imports dropped by 24 per cent,

from 307.1 tons in 2014 to 233.1 tons in 2015. Major importing countries included the Russian Federation (23 per cent), Brazil (19 per cent), Ukraine (8 per cent), the Islamic Republic of Iran and Switzerland (each accounting for 5 per cent).

110. Global manufacture of barbital fluctuated greatly in the decade up to 2014, averaging 92 tons per year. In 2014, total output continued to drop, from 86 tons to 58 tons (116 million S-DDD), but then increased to 64.9 tons in 2015. China, the world's leading manufacturer, accounted for 57.9 tons and Japan and Germany for the remainder. Total calculated consumption of barbital dropped from 67 tons to 47.7 tons in 2015. China continued to be the major user of the substance, with a calculated consumption level of 41 tons. Italy, the United States and France (in descending order) used more than 1 ton of barbital each in 2015.

111. Total imports of barbital decreased from 20 tons in 2013 to 14 tons in 2014, largely because of a significant reduction reported by Germany (from 13 tons to 2.5 tons). Imports dropped further in 2015, to a record low of only 2 tons. The largest imports were reported by Italy (974 kg), followed by Bulgaria (890 kg). Similarly, global exports dropped as well, with a total reported volume of 7.8 tons, 91 per cent of which was exported by Germany. The other exporters included Japan, Switzerland and the Netherlands (in descending order).

112. During the period 2004-2012, global manufacture of methylphenobarbital fluctuated considerably, ranging between 10 kg (2011) and 22 tons (2008), mainly because of significant changes in the output reported by some manufacturing countries, namely India, Switzerland and the United States. Unlike 2014, when no manufacture was reported, in 2015 India reported manufacture of 972 kg of the substance. No other manufacture was reported. Global stocks continued to decline, from 3 tons in 2014 to 2 tons in 2015, with 88 per cent being held by Switzerland.

113. Total imports of methylphenobarbital remained relatively stable, with a slight drop from 1.6 tons to 1.2 tons in 2015. The lead importers continued to be (in descending order) Germany (550 kg), Croatia (450 kg) and Italy (200 kg). The lead exporter in 2015 was India, which exported one ton of the substance, followed by Germany (550 kg). Together, those two countries accounted for 92 per cent of total reported exports. With regard to total calculated consumption, Switzerland, Croatia, Italy and Bosnia and Herzegovina (in descending order) were the main users of the substance.

114. During the period 2004-2009, allobarbital was manufactured intermittently by Belgium and Germany, in amounts of several tons per year. No manufacture was

recorded for the period 2010-2012. No manufacture of the substance was reported in 2014 and 2015, and global stocks of the substance continued to drop, from 496 kg to 440 kg. The majority of the stocks continued to be held in Jordan (75 per cent). Turkey decreased its stocks by 80 per cent compared with 2014, as did Germany (by almost 100 per cent). Israel, however, increased its stocks from 51 kg to 89 kg in 2015. While total exports dropped from 450 kg in 2013 to 300 kg in 2014, reported exports amounted to less than 1 kg in 2015, all reported by Germany.

115. Manufacture of secbutabarbital averaged about 60 kg per year during the period 2009-2013. After Germany stopped manufacturing secbutabarbital in 2003, the United States became the only manufacturer. In 2015, the United States manufactured 86 kg, compared with 0.1 kg of the substance manufactured in 2014. Equally, global stocks increased, from 60 kg to 108 kg in 2015, with 68 kg held by the United States and 40 kg by Lebanon. Although the United States was the leading exporter and Lebanon the top importer in 2014, the United States did not report any export of the substance in 2015. Less than 1 kg was exported by Germany. Imports in 2015 were reported by Lebanon (40 kg) and Belgium (less than 1 kg).

116. Butobarbital was manufactured intermittently during the past decade. Manufacture of butobarbital was reported for 2008 only by Germany (117 kg), for 2012 only by the United States (94 kg) and for 2013 only by Germany (85 kg). No manufacture of the substance was reported in 2014. In 2015, Canada reported the manufacture of 57 grams of the substance. Global stocks of butobarbital therefore continued to drop, from 76 kg to 66 kg, with 70 per cent held by the United Kingdom and 21 per cent by Germany.

Barbiturates in Schedules II, III and IV

117. Of the 12 barbiturates listed in Schedules II, III and IV of the 1971 Convention, five substances, namely phenobarbital, butalbital, pentobarbital, barbital and amobarbital (in descending order), together accounted, on average, for 99 per cent of total yearly reported manufacture during the period 2005-2015. The shares of those five substances in total reported manufacture in 2015 are shown in figure 28. Phenobarbital remained the most widely manufactured barbiturate in 2015, accounting for 67 per cent of the total manufacture of the 12 barbiturates, followed by butalbital (21 per cent) and pentobarbital (8 per cent). China continued to be the leading manufacturer, accounting for 59 per cent of total manufacture of the entire group of barbiturates, followed by the United States (33 per cent), Germany (5 per cent) and Japan (3 per cent) (see figure 29).

Figure 28. Barbiturates in Schedules II, III and IV: share of total reported manufacture, by substance, 2015

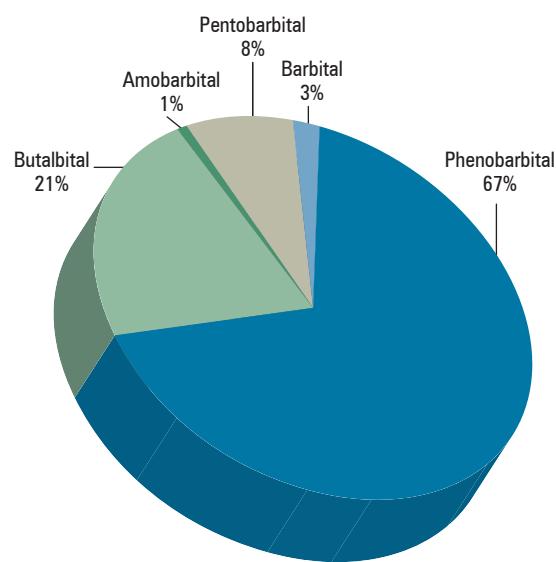

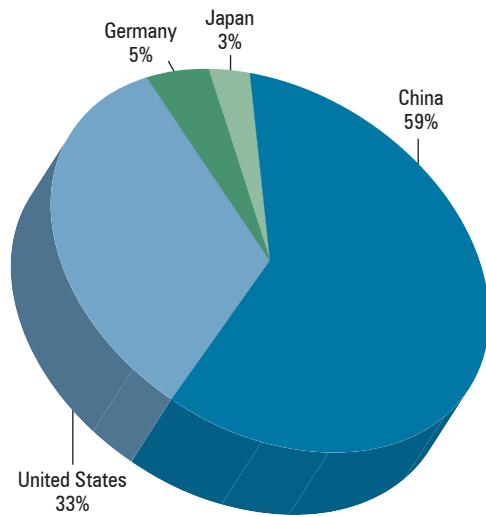

Figure 29. Barbiturates in Schedules II, III and IV: total reported manufacture, by country, 2015

Other sedative-hypnotics

118. Four substances from the group of sedative-hypnotics in Schedule IV are neither barbiturates nor benzodiazepines: ethchlorvynol, ethinamate, methyprylon and zolpidem.

119. Since 1999, when ethchlorvynol was last manufactured in the United States (1.3 tons), only Canada has reported manufacture (1 gram) of the substance, in 2014.

Ethinamate was last manufactured in 1979, when Japan reported manufacture of 4.3 tons of the substance. Since then, on only two occasions have minor quantities of the substance been manufactured: when the United States reported 1 gram of ethinamate manufactured in 2007 and 6 grams in 2011. No manufacture of methyprylon has been reported since 1990.

120. Zolpidem is used mainly for the treatment of insomnia. During the period 2006–2015, global manufacture of the substance fluctuated widely, between 20 and 50 tons, around a 10-year average of 36 tons. Those fluctuations have reflected the changing output of the main manufacturing countries of France, India, Czechia, Israel and Canada (in descending order), which jointly accounted for 91 per cent of global manufacture in the past five years. Total reported manufacture of zolpidem more than doubled, increasing from 20 tons in 2014 to 41 tons

(4.1 billion S-DDD) in 2015. India accounted for 29 per cent (11.7 tons), France for 24 per cent (9.9 tons) and Czechia and Israel each for 14 per cent (5.9 tons) of global manufacture of zolpidem in 2015. Total reported stocks of zolpidem have gradually decreased in recent years from a peak of 30.8 tons in 2012 to 15.2 tons (1.5 billion S-DDD) in 2015, the majority of which were held in Israel, India, Ireland and the United States (in descending order).

121. Zolpidem is one of the most widely traded and used psychotropic substances. Global reported imports amounted to 31 tons in 2015, with 32 countries reporting exports of the substance to 85 countries. India (10.6 tons), France (7.5 tons), Czechia (7.3 tons), Israel (2.2 tons) and Ireland (2 tons) were the main exporters in 2015, accounting for 81 per cent of global exports. France, the United States, Japan, Argentina, Israel, Canada and Czechia (in that order) had the highest levels of calculated consumption in 2015.

Part three

Troisième partie

Tercera parte

Table IV. Levels of consumption of groups of psychotropic substances in defined daily doses for statistical purposes (S-DDD) per thousand inhabitants per day

The Convention on Psychotropic Substances of 1971 does not foresee the reporting of consumption of psychotropic substances to the Board. Levels of consumption of groups of psychotropic substances in defined daily doses for statistical purposes (S-DDD) per thousand inhabitants per day have therefore been calculated on the basis of statistics on manufacture and trade provided by Governments. To exclude the impact of yearly fluctuations on the calculated annual consumption, the average for the three-year period 2013-2015 was calculated. In countries that do not manufacture and export psychotropic substances, quantities declared as imported are considered to be destined for consumption. For countries with manufacture and exports of psychotropic substances, the average annual manufacture is added to the average annual import; the average annual export and amounts of psychotropic substances used for conversion into other psychotropic or non-psychotropic substances are deducted. Countries and territories are presented in order of descending levels of consumption expressed in numbers of defined daily doses consumed on average per day and per thousand inhabitants. The names of territories appear in italics.

Conclusions on the actual level of consumption of psychotropic substances should be drawn with caution as data on manufacture and trade reported by Governments may not be complete or may not

cover all substances. High levels of consumption may, however, indicate over-prescription and/or diversion into illicit channels. The Governments concerned should review the data. The groups of psychotropic substances are presented in table III.2.

Pursuant to Commission on Narcotic Drugs resolution 54/6, which encourages Member States to report to the International Narcotics Control Board data on the consumption of psychotropic substances, Governments have started to submit such data since the year 2010. The amount of data received can not yet lead to a comprehensive comparison of consumption levels of psychotropic substances between countries or years. The Board therefore decided to continue to publish, in this edition of the technical publication on psychotropic substances, the calculated consumption levels of psychotropic substances based on the statistics submitted by Governments in form P. Nevertheless, since the data on consumption received from Governments are sometimes quite different from the calculated consumption data, and since the reported consumption levels are considered more accurate than the consumption levels calculated by the Board, the Board shows the levels of reported consumption of psychotropic substances, when such data have been received, together with the levels of calculated consumption.

Tableau IV. Niveaux de consommation des substances psychotropes par groupe en doses quotidiennes déterminées à des fins statistiques (S-DDD) par millier d'habitants et par jour

La Convention de 1971 sur les substances psychotropes ne prévoit pas la communication à l'OICS de données sur la consommation des substances psychotropes. Les niveaux de consommation des groupes de substances psychotropes en doses quotidiennes déterminées à des fins statistiques (S-DDD) par millier d'habitants et par jour ont donc été calculés d'après les statistiques sur la fabrication et le commerce fournies par les gouvernements. Pour pallier l'impact des fluctuations d'une année à l'autre de la fabrication et du commerce sur la consommation annuelle ainsi déterminée, on a calculé la moyenne pour la période triennale allant de 2013 à 2015. Concernant les pays qui ne fabriquent ni n'exportent de substances psychotropes, les quantités qu'ils signalent avoir importées sont considérées comme étant destinées à la consommation. Pour les pays fabricants et exportateurs de substances psychotropes, les quantités annuelles moyennes fabriquées sont ajoutées aux quantités annuelles moyennes importées; les exportations annuelles moyennes et les quantités de substances psychotropes transformées en d'autres substances psychotropes ou non psychotropes sont déduites. Les pays et territoires sont présentés par ordre décroissant du niveau de consommation exprimé en nombre de doses quotidiennes déterminées consommées en moyenne par jour et par millier d'habitants. Les noms des territoires apparaissent en italique.

Il faut être prudent si l'on tire des conclusions sur les niveaux réels de la consommation de substances psychotropes car les renseigne-

ments sur la fabrication et le commerce fournis par les gouvernements peuvent être incomplets ou ne pas porter sur toutes les substances. Toutefois, des niveaux de consommation élevés peuvent être le signe de surprescriptions ou de détournements vers les circuits illicites. Les gouvernements intéressés devraient vérifier ces données. Les groupes de substances psychotropes sont présentés au tableau III.2.

En application de la résolution 54/6 de la Commission des stupéfiants, par laquelle les États Membres sont engagés à communiquer à l'Organe international de contrôle des stupéfiants des données sur la consommation des substances psychotropes, des gouvernements ont commencé à fournir de telles données en 2010. Le volume de données reçus ne permettant pas encore de vraiment comparer les niveaux de consommation d'un pays à l'autre ou d'une année à l'autre, l'OICS a décidé de publier dans la présente édition de sa publication technique sur les substances psychotropes, comme précédemment, le niveau de consommation tel qu'il est calculé à partir des statistiques fournies par les gouvernements dans le formulaire P. Toutefois, vu que les données sur la consommation reçues des gouvernements diffèrent parfois sensiblement des données sur la consommation qui sont calculées, et vu que les niveaux de consommation communiqués par les gouvernements sont considérés comme plus exacts que ceux calculés par l'OICS, ce dernier a indiqué les niveaux de consommation communiqués, lorsqu'ils étaient disponibles, en plus des niveaux calculés.

Cuadro IV. Niveles de consumo de sustancias sicotrópicas por grupos en dosis diarias definidas con fines estadísticos (S-DDD) por millar de habitantes por día

El Convenio sobre Substancias Sicótropicas de 1971 no prevé que se presenten informes a la Junta sobre el consumo de sustancias sicotrópicas. Los niveles de consumo de sustancias sicotrópicas por grupos se calculan en dosis diarias definidas con fines estadísticos (S-DDD) por millar de habitantes por día en base a las estadísticas sobre fabricación y comercio suministradas por los gobiernos. A fin de excluir la repercusión de las fluctuaciones anuales de la fabricación y el comercio en el cálculo del consumo anual, se ha tomado el promedio correspondiente al trienio de 2013 a 2015. En el caso de los países que no fabrican ni exportan sustancias sicotrópicas, las cantidades importadas declaradas se consideran destinadas al consumo. En cuanto a los países que fabrican y exportan dichas sustancias, la fabricación anual media se suma a la importación anual media; se deducen la exportación anual media y las cantidades de sustancias sicotrópicas utilizadas para su transformación en otras sustancias sicotrópicas o no sicotrópicas. Los países y territorios se presentan por orden decreciente de niveles de consumo, expresados en número de S-DDD consumidas en promedio por día y por millar de habitantes. Los nombres de los territorios figuran en letra cursiva.

Conviene ser prudente al deducir conclusiones sobre el nivel real de consumo de sustancias sicotrópicas, pues es posible que los datos sobre fabricación y comercio comunicados por los gobiernos no sean completos o no abarquen todas las sustancias. En cambio, unos niveles de consumo elevados pueden ser indicio de un

exceso de prescripciones médicas y/o desviación hacia los canales ilícitos. Los Gobiernos interesados deben examinar los datos. Los grupos de sustancias sicotrópicas se presentan en el cuadro III.2.

En cumplimiento de lo dispuesto en la resolución 54/6 de la Comisión de Estupefacientes, en la que la Comisión alentó a los Estados Miembros a que comunicasen datos a la Junta Internacional de Fiscalización de Estupefacientes sobre el consumo de sustancias sicotrópicas, los gobiernos han empezado a comunicar los datos a partir de 2010. La cantidad de datos recibidos no es suficiente para llevar a cabo una comparación válida de los niveles de consumo de sustancias sicotrópicas entre los distintos países o los diversos años. En consecuencia, la Junta decidió que en la presente edición de la publicación técnica sobre sustancias sicotrópicas se seguirían publicando los niveles de consumo de sustancias sicotrópicas calculados a partir de las estadísticas proporcionadas por los gobiernos en el formulario P. No obstante, como los datos sobre el consumo recibidos de los gobiernos son en ocasiones bastante diferentes de los datos sobre el consumo calculados, y como los niveles de consumo comunicados se consideran más exactos que los niveles de consumo calculados por la Junta, la Junta ha indicado los niveles de consumo de sustancias sicotrópicas comunicados, cuando se han recibido esos datos, junto con los niveles de consumo calculados.

^aThe data on consumption could have been reported for 2013, 2014, 2015, or for all three years. — Des données sur la consommation ont pu être communiquées pour 2013, 2014, 2015 ou pour ces trois années. — Los datos sobre el consumo podrían haberse comunicado respecto de 2013, 2014, 2015 o de los tres años.

^bIn the past, the Board calculated one S-DDD to be equal to 1.2 mg of buprenorphine, a measure that reflected the dosage units used for treatment of pain in the late 1990s. In view of the increasing use of higher dosage units of buprenorphine for the treatment of pain and opioid dependence, the Board decided to calculate, as of 2010, one S-DDD to be equal to 8 mg of buprenorphine. Data on buprenorphine expressed in S-DDD in this publication are therefore not comparable with the corresponding data shown for previous years. — Par le passé, l'OICS se fondait, pour la bupréorphine, sur une S-DDD de 1,2 mg, ce qui correspondait à la dose utilisée pour le traitement de la douleur à la fin des années 90. Considérant l'emploi de plus en plus fréquent de doses supérieures pour le traitement de la douleur et de la dépendance aux opioïdes, l'OICS a décidé de se fonder, à compter de 2010, sur une S-DDD de 8 mg. Les données relatives à la bupréorphine qui sont exprimées en S-DDD dans la présente publication ne sont donc pas comparables avec les données correspondantes qui figurent dans les publications des années précédentes. — Anteriormente la Junta calculaba que una S-DDD equivalía a 1,2 miligramos de buprenorfina, cantidad que reflejaba las unidades de dosificación utilizadas para el tratamiento del dolor a finales del decenio de 1990. Debido al uso cada vez más generalizado de unidades de dosificación de buprenorfina más altas para el tratamiento del dolor y la dependencia a los opioídes, la Junta decidió calcular, a partir de 2010, que una S-DDD equivalía a 8 miligramos de buprenorfina. Por tanto, los datos sobre la buprenorfina expresados en S-DDD en la presente publicación no son comparables a los datos correspondientes a años anteriores.

^cSince 17 May 2016, "Czechia" has replaced "Czech Republic" as the short name in the United Nations. — Depuis le 17 mai 2016, "Tchéquie" est la forme courte utilisée à l'Organisation des Nations Unies à la place de "République tchèque". — Desde el 17 de mayo de 2016, las Naciones Unidas utilizan "Chequia" en lugar de "la República Checa" como nombre corto del país.

^dSince 3 June 2006, the membership of Serbia and Montenegro in the United Nations has been continued by Serbia. — Le 3 juin 2006, la Serbie a succédé à la Serbie-et-Monténégro en tant que Membre de l'Organisation des Nations Unies. — A partir del 3 de junio de 2006, Serbia ha sucedido a Serbia y Montenegro como Estado Miembro de las Naciones Unidas.

^eBy its resolution 60/264 of 28 June 2006, the General Assembly decided to admit Montenegro to membership in the United Nations — Par sa résolution 60/264 du 28 juin 2006, l'Assemblée générale a décidé d'admettre le Monténégro à l'Organisation des Nations Unies. — En su resolución 60/264, de 28 de junio de 2006, la Asamblea General decidió admitir a Montenegro como Estado Miembro de las Naciones Unidas.

^fThe Netherlands Antilles was dissolved on 10 October 2010, resulting in two new constituent entities, Curaçao and Sint Maarten. — Les Antilles néerlandaises ont été dissoutes le 10 octobre 2010, donnant ainsi naissance à deux entités distinctes, Curaçao et Saint-Martin (partie néerlandaise). — Las Antillas Neerlandesas quedaron disueltas el 10 de octubre de 2010 y pasaron a ser dos nuevas entidades autónomas: Curaçao y San Martín.

^gSince 25 October 2013, "Cabo Verde" has replaced "Cape Verde" as the short name used in the United Nations. — Depuis le 25 octobre 2013, "Cabo Verde" est la forme courte utilisée à l'Organisation des Nations Unies à la place de "Cap-Vert".

**Table V. Assessments of annual medical and scientific requirements
for substances listed in Schedules II, III and IV of the Convention
on Psychotropic Substances of 1971**

Assessments of annual medical and scientific requirements for substances listed in Schedules II, III and IV of the Convention on Psychotropic Substances of 1971 are published in accordance with the provisions of Economic and Social Council resolutions 1981/7 and 1991/44. In these resolutions, the Council invited Governments to assess, from time to time, their annual requirements and to submit those assessments to INCB for publication.

The reported medical and scientific requirements are intended to supplement the import and export control system for international trade established in article 12 of the 1971 Convention. The reported assessments are intended to assist the national authorities of exporting countries in ascertaining whether a requested import appears to be excessive in comparison with a reported annual requirement for that country. If that is the case, the export should be denied until the designated national authorities of the importing country confirm the legitimacy of the import request and authenticate the import documents. It is expected that scrupulous adherence to this procedure will substantially diminish attempts at diversion, especially those involving very large quantities.

The countries and territories that have submitted assessments for psychotropic substances are presented in English alphabetical order. The names of territories appear in italics. The names of countries and territories are those that were in official use at the time the data were collected (2015).

Pursuant to Economic and Social Council resolution 1996/30, INCB has established assessments of annual licit requirements of psychotropic substances for countries that have not yet submitted such information. In the table below, assessments established by INCB are indicated by footnote ^(b).

The assessments established by INCB reflect previous patterns of use of psychotropic substances in the respective countries. They should not be considered as recommended consumption levels. The only objective of these assessments is to provide exporting countries with approximate information on legitimate requirements of the importing country. The Board encourages all Governments concerned to establish their own assessments as soon as possible.

Exporting countries should note that importing countries are free to replace any substance for which an assessment has been established by INCB with another substance from the same therapeutic group and the same schedule, provided that the quantity to be imported, expressed in defined daily doses for statistical purposes (S-DDDs), does not exceed the equivalent of the assessment also expressed in S-DDDs. The composition of the respective therapeutic groups and the S-DDDs of the substances in those groups are indicated in table III.2 of the present publication.

Tableau V. Prévisions des besoins annuels médicaux et scientifiques concernant les substances énumérées aux Tableaux II, III et IV de la Convention de 1971 sur les substances psychotropes

Les prévisions des besoins annuels médicaux et scientifiques concernant les substances énumérées aux Tableaux II, III et IV de la Convention de 1971 sur les substances psychotropes sont communiquées conformément aux dispositions des résolutions 1981/7 et 1991/44 du Conseil économique et social. Dans ces résolutions, le Conseil a invité les gouvernements à effectuer de temps à autre des prévisions de leurs besoins annuels et à communiquer ces prévisions à l'Organe international de contrôle des stupéfiants afin qu'elles soient publiées.

Les indications relatives aux besoins médicaux et scientifiques sont destinées à compléter le système de contrôle du commerce international à l'importation et à l'exportation prévu à l'article 12 de la Convention de 1971. Les prévisions doivent permettre d'aider les autorités des pays exportateurs à déterminer si une importation demandée par un pays semble excessive par rapport aux besoins annuels signalés par ce pays. Dans ce cas, il ne faudra pas que l'exportation ait lieu tant que les services officiels du pays importateur n'auront pas confirmé la validité de la demande d'importation et authentifié les documents d'importation. On pense qu'en se conformant scrupuleusement à cette procédure on parviendra à éliminer les tentatives de détournement, notamment celles qui impliquent de très grandes quantités des substances visées.

Les pays et territoires qui ont soumis des prévisions pour des substances psychotropes sont présentés dans l'ordre alphabétique anglais. Les noms des territoires sont en italien. Les noms des pays

et territoires sont ceux qui étaient officiellement en usage au moment où les données ont été recueillies (2015).

En application de la résolution 1996/30 du Conseil économique et social, l'OICS a évalué les besoins annuels en substances psychotropes utilisées à des fins licites pour les pays qui ne les ont pas encore communiqués. Dans le tableau ci-après, les évaluations ainsi établies par l'OICS comportent un renvoi à une note de bas de page indiquée par une lettre (^b).

L'OICS a évalué les besoins en substances psychotropes des différents pays en se fondant sur les profils d'utilisation propres à ces pays. Les prévisions indiquées ne sont pas des niveaux de consommation recommandés. Elles ont été établies dans le seul but de fournir aux pays exportateurs des renseignements approximatifs sur les besoins légitimes des pays importateurs. L'OICS encourage tous les gouvernements visés à établir leurs propres prévisions aussitôt que possible.

Les pays exportateurs doivent noter que les pays importateurs sont libres de remplacer toute substance, pour laquelle l'OICS a évalué les besoins, par une autre substance appartenant au même groupe thérapeutique et inscrite au même tableau, à condition que la quantité à importer, exprimée en doses quotidiennes déterminées à des fins statistiques S-DDD, ne dépasse pas l'équivalent de la prévision (également exprimé en S-DDD). La composition des différents groupes thérapeutiques et la valeur des S-DDD des substances appartenant à ces groupes sont indiquées au tableau III.2 de la présente publication.

Cuadro V. Previsiones de las necesidades anuales para fines médicos y científicos de las sustancias incluidas en las Listas II, III y IV del Convenio sobre Sustancias Sicotrópicas de 1971

Las previsiones de las necesidades anuales para fines médicos y científicos de las sustancias incluidas en las Listas II, III y IV del Convenio sobre Sustancias Sicotrópicas de 1971 se publican de conformidad con las disposiciones de las resoluciones del Consejo Económico y Social 1981/7 y 1991/44. El Consejo invitó a los gobiernos que evaluaran periódicamente sus necesidades anuales y a que presentaran esas previsiones a la JIFE con miras a publicarlas.

Los informes sobre las necesidades para fines médicos y científicos complementan el sistema de control de importaciones y exportaciones, en el comercio internacional, establecido en el artículo 12 del Convenio de 1971. Las previsiones presentadas tienen por objeto ayudar a las autoridades nacionales de los países exportadores a determinar si la importación solicitada parece excesiva en comparación con las necesidades anuales declaradas por el país en cuestión. En esos casos, debe negarse la exportación hasta que las autoridades competentes del país importador confirmen la legitimidad de la petición de importación y autentifiquen los documentos de importación. Cabe esperar, que si se sigue escrupulosamente este procedimiento disminuyan considerablemente los intentos de desviación, especialmente los que entrañan grandes cantidades de sustancias.

Los países y territorios que han suministrado previsiones para las sustancias sicotrópicas se presentan en orden alfabético inglés. Los nombres de los territorios figuran en letra cursiva. Los

nombres de los países y territorios son los que utilizaban oficialmente en el momento en que se obtuvo la información (2015).

De conformidad con la resolución 1996/30 del Consejo Económico y Social, la JIFE ha establecido previsiones de las necesidades anuales del uso lícito de sustancias sicotrópicas para los países que aún no han presentado tal información. En el siguiente cuadro, las previsiones establecidas por la JIFE se indican con una nota de pie página ^(b).

Las previsiones establecidas por la JIFE reflejan los perfiles previos de consumo de sustancias sicotrópicas en los países respectivos. Estas previsiones no deben ser consideradas como niveles de consumo recomendados. Su único objetivo es proporcionar a los países exportadores información aproximada sobre las necesidades legítimas del país importador. La Junta exhorta a todos los gobiernos interesados a establecer sus propias previsiones tan pronto como sea posible.

Los países exportadores deberán tener en cuenta que los países importadores pueden reemplazar cualquier sustancia para la cual la JIFE ha establecido una previsión por otra sustancia perteneciente al mismo grupo terapéutico y a la misma lista, siempre y cuando la cantidad que se vaya a importar, expresada en dosis diarias definidas con fines terapéuticos (S-DDD), no exceda de la cantidad equivalente de la previsión, expresada también en S-DDD. En el Cuadro III.2 de la presente publicación se indican la composición de los respectivos grupos terapéuticos y las S-DDD de las sustancias de esos grupos.

Table VI. Prohibition of and restrictions on export and import pursuant to article 13 of the Convention on Psychotropic Substances of 1971

The Secretary-General has transmitted to all Governments notifications concerning the prohibition of the importation of specific substances in Schedules II, III and IV of the Convention on Psychotropic Substances of 1971 that were received from the countries indicated in the table below. The notifications are presented as follows: notifying countries listed alphabetically, followed by the prohibited substances and dates of notification. The prohibitions are effective, with respect to exporting

countries, as of the date of receipt of the Secretary-General's notification.

Upon notification of a prohibition, an exporting country must take measures to ensure that none of the substances specified in the notification are exported to the country or any of the regions in the notifying country. Exports of a prohibited substance may be permitted only when a special import licence has been issued by the notifying country, in accordance with the provisions of article 13 of the 1971 Convention.

Tableau VI. Interdiction et restrictions à l'exportation et à l'importation conformément à l'article 13 de la Convention sur les substances psychotropes de 1971

Le Secrétaire général a transmis à tous les gouvernements des notifications reçues des pays énumérés dans le tableau ci-après concernant l'interdiction d'importer certaines substances figurant aux Tableaux II, III et IV de la Convention sur les substances psychotropes de 1971. Les notifications sont présentées de la façon suivante: pays ayant fait une notification, classés par ordre alphabétique, suivis des substances interdites et de la date de la notification. Les interdictions prennent effet pour les pays exportateurs à la date de réception de la communication émanant du Secrétaire général.

Au reçu d'une notification d'interdiction, les autorités des pays exportateurs doivent prendre les mesures nécessaires pour s'assurer qu'aucune des substances spécifiées dans ladite notification ne sera exportée vers le pays ayant fait la notification, ou vers une de ses régions. L'exportation d'une substance interdite ne peut être autorisée que si un permis spécial d'importation a été émis par l'autorité compétente du pays ayant fait la notification, conformément aux dispositions de l'article 13 de la Convention de 1971.

Cuadro VI. Prohibición y restricciones a la exportación e importación de conformidad con el artículo 13 del Convenio sobre Sustancias Sicotrópicas de 1971

El Secretario General ha transmitido a todos los gobiernos notificaciones recibidas de los países, que se indican en el cuadro siguiente, relativas a la prohibición de la importación de determinadas sustancias sicotrópicas de las Listas II, III y IV del Convenio sobre sustancias sicotrópicas de 1971. Las notificaciones se indican a continuación de la siguiente forma: países notificantes por orden alfabético seguidos de las sustancias prohibidas y las fechas de notificación. Las prohibiciones surtirán efecto, con respecto a los países exportadores, a partir de la fecha en que éstos reciban la notificación del Secretario General.

Al recibir una notificación de prohibición de importación, las autoridades de los países exportadores deberán tomar las medidas necesarias para asegurar que ninguna de las sustancias especificadas en la mencionada notificación sea exportada al país que ha hecho la notificación ni a ninguna de sus regiones. La exportación de una sustancia prohibida puede ser autorizada solamente si las autoridades competentes del país que ha hecho la notificación emiten un permiso especial de importación con arreglo a las disposiciones del artículo 13 del Convenio de 1971.

Tables of reported statistics

The tables in the present section contain the statistical information on psychotropic substances in Schedules I-IV of the Convention on Psychotropic Substances of 1971 furnished to the International Narcotics Control Board (INCB) by Governments in accordance with article 16 of the Convention. As few Governments have reported the movement of substances listed in Schedule I, a brief statistical table, including statistics on total manufacture of those substances for the three-year period 2013-2015 and on stocks of and international trade in those substances for 2015, is provided. With regard to the statistical tables for substances in Schedules III and IV, it should be noted that, although the majority of countries and territories reported on substances in all schedules, some Governments have not yet extended the control measures of the 1971 Convention to all of the substances listed in Schedules III and IV. Therefore, for certain substances, the statistical data available to INCB may present only a partial picture of the global manufacture of and trade in those substances.

With respect to substances in Schedules I and II, Governments are requested by INCB to report quantities in grams. While the gram (g) is the unit of weight used in the statistics on substances in Schedule I, the kilogram (kg) is the unit of weight used for the statistics on substances in Schedules II, III and IV. If a country has reported the movement of less than 500 grams of a substance in Schedule II, that information has not been included in the statistical tables. However, such small quantities, as well as fractions of kilograms, have been considered when calculating the total manufacture, import and export of each substance. Therefore, for substances in Schedule II, the total generally exceeds the sum of the individual quantities expressed in full kilograms.

For substances in Schedule II, the presentation of the statistical data is made substance by substance. For each substance, the first part refers exclusively to data obtained from manufacturing countries.

The second and third parts refer to international trade. For substances in Schedule III, the manufacture of all substances is presented in the first part, while the second and third parts show international trade in all substances. For Schedules II and III, data for the period 2011-2015 are presented. Tables for substances in Schedule IV contain data for the years 2013-2015 only. For technical reasons, substances in Schedule IV are divided into the following five groups for the presentation of data on manufacture and international trade:

Group I: Central nervous system stimulants;

Group II: Anxiolytics, first part:
main benzodiazepines and meprobamate;

Group III: Anxiolytics, second part:
less common benzodiazepines;

Group IV: Benzodiazepines:
sedative-hypnotics and anti-epileptics;

Group V: Sedative-hypnotics and barbiturate-type
anti-epileptics.

The following symbols are used in the tables:

A dash (—) indicates nil or less than 500 grams in the case of substances in Schedule II, III or IV (less than 1 milligram in the case of substances in Schedule I);

A question mark (?) indicates that a statistical report was not furnished;

Two dots (..) indicate that a statistical report was furnished but data are not available for the substance in question.

Tableaux statistiques

Les tableaux de la présente section contiennent les renseignements statistiques sur les substances psychotropes inscrites aux Tableaux I à IV de la Convention sur les substances psychotropes de 1971 qui ont été fournis à l'Organe international de contrôle des stupéfiants (OICS) par les pays conformément à l'article 16 de la Convention. Les pays qui ont signalé un mouvement de substances inscrites au Tableau I étant peu nombreux, on a indiqué dans un tableau statistique sommaire les quantités totales de ces substances fabriquées au cours de la période triennale 2013-2015, ainsi que les stocks et les échanges internationaux en 2015. Il convient de noter que, bien que la plupart des pays et territoires aient communiqué des informations sur les substances de tous les tableaux, un certain nombre de gouvernements n'ont pas encore étendu les mesures de contrôle au titre de la Convention de 1971 à toutes les substances inscrites aux Tableaux III et IV. Il se peut donc que les renseignements statistiques dont dispose l'OICS ne donnent qu'une image partielle de l'ensemble de la fabrication et du commerce de certaines substances.

Concernant les substances inscrites aux Tableaux I et II, l'OICS demande aux États d'indiquer les quantités en grammes. Les poids sont exprimés en grammes dans les statistiques concernant les substances du Tableau I et en kilogrammes dans les statistiques concernant celles inscrites aux Tableaux II, III et IV. Le mouvement d'une quantité inférieure à 500 grammes d'une substance inscrite au Tableau II n'a pas été tenu compte dans les tableaux. Toutefois, les quantités inférieures à un kilogramme ont été prises en compte lors du calcul de la quantité totale fabriquée, importée et exportée pour chaque substance. Pour les substances inscrites au Tableau II, les totaux dépassent donc généralement la somme des quantités exprimées en kilogrammes prises individuellement.

Pour les substances inscrites au Tableau II, les données statistiques sont présentées substance par substance. Pour chaque substance, la première partie porte exclusivement sur les renseignements fournis par les pays fabricants. La deuxième et la troisième partie

portent sur le commerce international. Pour les substances inscrites au Tableau III, le total de la fabrication pour toutes les substances est présenté dans la première partie, alors que le commerce international de toutes les substances est indiqué dans les deuxième et troisième parties. Pour les Tableaux II et III, les renseignements sont indiqués pour la période allant de 2011 à 2015. Les tableaux portant sur les substances inscrites au Tableau IV contiennent des renseignements pour les années 2013 à 2015 seulement. Pour des raisons techniques, les données sur la fabrication et le commerce international des substances inscrites au Tableau IV sont réparties en cinq groupes:

Groupe I: Stimulants du système nerveux central;

Groupe II: Anxiolytiques, première partie:
principales benzodiazépines et méprobamate;

Groupe III: Anxiolytiques, deuxième partie:
benzodiazépines moins courantes;

Groupe IV: Benzodiazépines:
sédatifs hypnotiques et antiépileptiques;

Groupe V: Sédatifs hypnotiques et antiépileptiques de type barbiturique.

Les symboles suivants sont utilisés dans les tableaux:

Un tiret (—) indique une quantité nulle ou inférieure à 500 grammes dans le cas des substances des Tableaux II, III ou IV (inférieure à 1 milligramme dans le cas des substances du Tableau I);

Un point d'interrogation (?) indique que le rapport statistique n'a pas été communiqué;

Deux points (..) indiquent que le rapport statistique a été communiqué, mais qu'aucune information n'est disponible pour la substance en question.

Cuadros estadísticos

Los cuadros de la presente sección contienen la información estadística sobre las sustancias sicotrópicas de las Listas I a IV del Convenio sobre Sustancias Sicotrópicas de 1971 suministradas a la Junta Internacional de Fiscalización de Estupefacientes (JIFE) por los Gobiernos de conformidad con lo dispuesto en el artículo 16 del Convenio. Dado que muy pocos Gobiernos han informado del movimiento de sustancias de la Lista I, sólo se presenta un breve cuadro estadístico sobre esas sustancias, en que se incluyen estadísticas sobre su fabricación total en el trienio comprendido entre 2013 y 2015 y sobre las existencias y el comercio internacionales de esas sustancias en 2015. Con respecto a los cuadros estadísticos sobre las sustancias de las Listas III y IV, cabe observar que, si bien la mayoría de los países y territorios informan sobre las sustancias de todas las listas, algunos Gobiernos aún no aplican las medidas de fiscalización del Convenio de 1971 a todas las sustancias de las Listas III y IV. Por consiguiente, la información estadística de que dispone la JIFE en relación con determinadas sustancias puede dar solamente una visión parcial de su fabricación y comercio a nivel mundial.

Con respecto a las sustancias de las Listas I y II, la JIFE solicita a los Gobiernos que comuniquen las cantidades en gramos. Si bien la unidad de peso utilizada en las estadísticas sobre las sustancias de la Lista I es el gramo (g), la utilizada en las estadísticas sobre las sustancias de las Listas II, III y IV es el kilogramo (kg). Si su país ha declarado un movimiento de menos de 500 gramos de una sustancia de la Lista II, esa información no se ha incluido en los cuadros estadísticos. No obstante, tanto esas pequeñas cantidades como las fracciones de kilogramo se han tomado en consideración al calcular la fabricación, importación y exportación de cada sustancia. En consecuencia, con respecto a las sustancias de la Lista II, el total suele ser superior a la suma de las cantidades expresadas en kilogramos enteros.

Con respecto a las sustancias de la Lista II, la presentación de los datos estadísticos se hace sustancia por sustancia. Para cada

sustancia, la primera parte se refiere exclusivamente a los datos obtenidos de los países fabricantes. Las partes segunda y tercera se refieren al comercio internacional. Para las sustancias de la Lista III, la fabricación de todas las sustancias se presenta en la primera parte, mientras que las partes segunda y tercera indican el comercio internacional de todas las sustancias. Para las Listas II y III, se presentan datos correspondientes al período 2011-2015. En los cuadros correspondientes a las sustancias de la Lista IV figuran datos correspondientes a los años 2013 a 2015 solamente. Por razones técnicas, las sustancias de la Lista IV se dividen en los cinco grupos siguientes para fines de presentación de los datos sobre fabricación y comercio internacionales:

- Grupo I:** Estimulantes del sistema nervioso central;
- Grupo II:** Ansiolíticos, primera parte:
principales benzodiazepinas y meprobamato;
- Grupo III:** Ansiolíticos, segunda parte:
benzodiazepinas menos comunes;
- Grupo IV:** Benzodiazepinas:
hipnótico-sedantes y antiepilepticos;
- Grupo V:** Barbitúricos empleados como hipnótico-sedantes y antiepilepticos.

En los cuadros se utilizan los siguientes símbolos:

La raya (—) indica que la cantidad es nula o inferior a 500 gramos en el caso de sustancias de las Listas II, III o IV (inferior a 1 milígramo en el caso de sustancias de la Lista I);

El signo de interrogación (?) indica un informe estadístico no comunicado;

Los dos puntos suspensivos (..) indican que el informe estadístico fue comunicado, pero no se dispone de información sobre la sustancia en cuestión.

^aSince 17 May 2016, "Czechia" has replaced "Czech Republic" as the short name in the United Nations. — Depuis le 17 mai 2016, "Tchéquie" est la forme courte utilisée à l'Organisation des Nations Unies à la place de "République tchèque". — Desde el 17 de mayo de 2016, las Naciones Unidas utilizan "Chequia" en lugar de "la República Checa" como nombre corto del país.

Annex IV

Substances in Schedule IV of the Convention on Psychotropic Substances of 1971, 2013-2015

Table A.IV.1. Central nervous system stimulants: manufacture, exports and imports	324
Table A.IV.2. Anxiolytics—the main benzodiazepines and meprobamate: manufacture, exports and imports	332
Table A.IV.3. Anxiolytics—less common benzodiazepines: manufacture, exports and imports	354
Table A.IV.4. Benzodiazepines—sedative-hypnotics and anti-epileptics: manufacture, exports and imports.....	362
Table A.IV.5. Sedative-hypnotics and barbiturate-type anti-epileptics: manufacture, exports and imports	380

Annexe IV

Substances du Tableau IV de la Convention sur les substances psychotropes de 1971, 2013-2015

Tableau A.IV.1. Stimulants du système nerveux central: fabrication, exportations et importations.....	324
Tableau A.IV.2. Anxiolytiques — les principales benzodiazépines et méprobamate: fabrication, exportations et importations . . .	332
Tableau A.IV.3. Anxiolytiques — les benzodiazépines moins courantes: fabrication, exportations et importations	354
Tableau A.IV.4. Benzodiazépines — les sédatifs hypnotiques et antiépileptiques: fabrication, exportations et importations . . .	362
Tableau A.IV.5. Sédatifs hypnotiques et antiépileptiques de type barbiturique: fabrication, exportations et importations . . .	380

Anexo IV

Sustancias de la Lista IV del Convenio sobre Sustancias Sicotrópicas de 1971, 2013-2015

Cuadro A.IV.1. Estimulantes del sistema nervioso central: fabricación, exportaciones e importaciones.....	324
Cuadro A.IV.2. Ansiolíticos—las principales benzodiazepinas y meprobamato: fabricación, exportaciones e importaciones . . .	332
Cuadro A.IV.3. Ansiolíticos—las benzodiazepinas menos comunes: fabricación, exportaciones e importaciones.....	354
Cuadro A.IV.4. Benzodiazepinas—los sedantes-hipnóticos y antiepilepticos: fabricación, exportaciones e importaciones.. .	362
Cuadro A.IV.5. Sedantes-hipnóticos y antiepilepticos de tipo barbitúrico: fabricación, exportaciones e importaciones . . .	380

Table A.IV.1. Central nervous system stimulants: manufacture, exports and imports

About the International Narcotics Control Board

The International Narcotics Control Board (INCB) is an independent and quasi-judicial control organ, established by treaty, that monitors the implementation of the international drug control treaties. It had predecessors under the former drug control treaties as far back as the time of the League of Nations.

Composition

INCB consists of 13 members who are elected by the Economic and Social Council and who serve in their personal capacity, not as government representatives. Three members with medical, pharmaceutical or pharmaceutical experience are elected from a list of persons nominated by the World Health Organization (WHO) and 10 members are elected from a list of persons nominated by Governments. Members of the Board are persons who, by their competence, impartiality and disinterestedness, command general confidence. The Council, in consultation with INCB, makes all arrangements necessary to ensure the full technical independence of the Board in carrying out its functions. INCB has a secretariat that assists it in the exercise of its treaty-related functions. The INCB secretariat is an administrative entity of the United Nations Office on Drugs and Crime, but it reports solely to the Board on matters of substance. INCB closely collaborates with the Office in the framework of arrangements approved by the Council in its resolution 1991/48. INCB also cooperates with other international bodies concerned with drug control, including not only the Council and its Commission on Narcotic Drugs, but also the relevant specialized agencies of the United Nations, particularly WHO. It also cooperates with bodies outside the United Nations system, especially the International Criminal Police Organization (INTERPOL) and the World Customs Organization (WCO).

Functions

The functions of INCB are laid down in the following treaties: the Single Convention on Narcotic Drugs of 1961 as amended by the 1972 Protocol; the Convention on Psychotropic Substances of 1971; and the United Nations Convention against Illicit Traffic in Narcotic Drugs and Psychotropic Substances of 1988. Broadly speaking, INCB deals with the following:

(a) As regards the licit manufacture of, trade in and use of drugs, INCB endeavours, in cooperation with Governments, to ensure that adequate supplies of drugs are available for medical and scientific uses and that the diversion of drugs from licit sources to illicit channels does not occur. INCB also monitors Governments' control over chemicals used in the illicit manufacture of drugs and assists them in preventing the diversion of those chemicals into illicit traffic;

(b) As regards the illicit manufacture of, trafficking in and use of drugs, INCB identifies weaknesses in national and international control systems and contributes to correcting such situations. INCB is also responsible for assessing chemicals used in the illicit manufacture of drugs in order to determine whether they should be placed under international control.

In the discharge of its responsibilities, INCB:

(a) Administers a system of estimates for narcotic drugs and a voluntary assessment system for psychotropic substances and

monitors licit activities involving drugs through a statistical returns system, with a view to assisting Governments in achieving, inter alia, a balance between supply and demand;

(b) Monitors and promotes measures taken by Governments to prevent the diversion of substances frequently used in the illicit manufacture of narcotic drugs and psychotropic substances and assesses such substances to determine whether there is a need for changes in the scope of control of Tables I and II of the 1988 Convention;

(c) Analyses information provided by Governments, United Nations bodies, specialized agencies and other competent international organizations, with a view to ensuring that the provisions of the international drug control treaties are adequately carried out by Governments, and recommends remedial measures;

(d) Maintains a permanent dialogue with Governments to assist them in complying with their obligations under the international drug control treaties and, to that end, recommends, where appropriate, technical or financial assistance of the provision.

INCB is called upon to ask for explanations in the event of apparent violations of the treaties, to propose appropriate remedial measures to Governments that are not fully applying the provisions of the treaties or are encountering difficulties in applying them and, where necessary, to assist Governments in overcoming such difficulties. If, however, INCB notes that the measures necessary to remedy a serious situation have not been taken, it may bring the matter to the attention of the parties concerned, the Commission on Narcotic Drugs and the Economic and Social Council. As a last resort, the treaties empower INCB to recommend to parties that they stop importing drugs from a defaulting country, exporting drugs to it or both. In all cases, INCB acts in close cooperation with Governments.

INCB assists national administrations in meeting their obligations under the conventions. To that end, it proposes and participates in regional training seminars and programmes for drug control administrators.

Reports

The international drug control treaties require INCB to prepare an annual report on its work. The annual report contains an analysis of the drug control situation worldwide so that Governments are kept aware of existing and potential situations that may endanger the objectives of the international drug control treaties. INCB draws the attention of Governments to gaps and weaknesses in national control and in treaty compliance; it also makes suggestions and recommendations for improvements at both the national and international levels. The annual report is based on information provided by Governments to INCB, United Nations entities and other organizations. It also uses information provided through other international organizations, such as INTERPOL and WCO, as well as regional organizations.

The annual report of INCB is supplemented by detailed technical reports. They contain data on the licit movement of narcotic drugs and psychotropic substances required for medical and scientific

purposes, together with an analysis of those data by INCB. Those data are required for the proper functioning of the system of control over the licit movement of narcotic drugs and psychotropic substances, including preventing their diversion to illicit channels. Moreover, under the provisions of article 12 of the 1988 Convention, INCB reports

annually to the Commission on Narcotic Drugs on the implementation of that article. That report, which gives an account of the results of the monitoring of precursors and of the chemicals frequently used in the illicit manufacture of narcotic drugs and psychotropic substances, is also published as a supplement to the annual report.

INTERNATIONAL NARCOTICS CONTROL BOARD

The International Narcotics Control Board (INCB) is the independent monitoring body for the implementation of United Nations international drug control conventions. It was established in 1968 in accordance with the Single Convention on Narcotic Drugs, 1961. It had predecessors under the former drug control treaties as far back as the time of the League of Nations.

Based on its activities, INCB publishes an annual report that is submitted to the United Nations Economic and Social Council through the Commission on Narcotic Drugs. The report provides a comprehensive survey of the drug control situation in various parts of the world. As an impartial body, INCB tries to identify and predict dangerous trends and suggests necessary measures to be taken.
